

Ministry of Health and Welfare  
R.O.C. (Taiwan)

# Introduction of Taiwan's Advanced Medical Specialties & Training Program

# Welcome Message from Minister Shih-Chung Chen of Health and Welfare

Taiwan's high-quality health care services have been praised as "Taiwan's Medical Miracle". As the COVID-19 pandemic continues to spread across the world, Taiwan has been able to contain the pandemic and minimize its impact on people's daily lives. Taiwan, exceling in medicine, technology and manufacturing, is willing and able to share its expertise and experience with the international society.

Having leading physicians, innovative medical technologies and advanced medical equipment, we not only provide specialization in medical treatments and services, but also publish research findings and achievements in multiple fields in international medical journals. Furthermore, many of our hospitals have experiences in hosting international conferences and workshops, and many of our doctors have also been invited as guest speakers to other counties.

Taiwan has offered well-organized clinical training programs for foreign medical professionals since 2002. In fact, we have outstanding hospitals being recognized globally in complicated medical surgeries, such as organ transplantation (e.g., liver and lung), treatments for cardiovascular diseases, use of extracorporeal membrane oxygenation (ECMO), minimally invasive surgery, and many more. Having these advanced skills and knowledge, we have attracted more than 3,800 medical professionals from 121 countries to Taiwan for clinical training programs in the past 7 years.

In response to travel restrictions during the COVID-19 pandemic, besides in-person courses, online courses are available this year, which provides a new channel for foreign medical professionals to learn advanced medical treatments from Taiwan and to make connections with hospitals in Taiwan more easily.

We believe in the proverb that "teach a man to fish, and you feed him for a lifetime". Continuous learning and practical trainings help these participants develop skills and keep abreast of the latest medical technologies, preparing them for emerging health challenges in their homelands.

On behalf of Taiwan's Ministry of Health and Welfare, we welcome prospective participants to join our world-class clinical training programs. We look forward to you joining this network of health care professionals and together contributing to the health and well-being of the people around the world.

*Shih-Chung Chen*

## Outstanding Medical Performance in Taiwan

Taiwan's hospitals are outstanding internationally in terms of complicated surgeries, such as cardiovascular surgery, minimal invasive surgery, and organ transplant and more

### Cardiovascular Surgery

- 4 out of the top 10 leading causes of death in Taiwan
- ✓ Bypass Graft
- ✓ AI Diagnosis
- ✓ MIS
- ✓ ...
- ✓ Catheter Ablation
- ✓ PTCA
- ✓ ECMO facilitation

### Minimally Invasive Surgery (MIS)

- 40+ da Vinci Robots all over Taiwan (high density)
- ✓ Urology
- ✓ Heart
- ✓ ...
- ✓ OB&GYN
- ✓ Orthopedics

### Organ Transplant

- Asia's first living donor liver transplant
- High 5-year survival rate compared to advanced countries
- ✓ Liver
- ✓ Heart
- ✓ ...
- ✓ Kidney
- ✓ Lung

### Plastic Surgery

- Micro-plastic reconstruction surgery
- Every 1 in 4 Korean Plastic surgeons is trained by Taiwan
- ✓ Craniofacial reconstruction
- ✓ 100% success rate for cleft lip/palate repairing

### Cancer Treatment

- 2 Proton Therapy Centers functioning, with the largest scale in Asia
- High 5-year survival rate (73%) compared to advanced countries
- ✓ Proton Therapy
- ✓ Stereotactic Body Radiotherapy
- ✓ ...
- ✓ Cell Therapy

# Introduction of Taiwan's Medical Specialties & Training

## International Medical Training

More than 3,800 overseas medical professionals came for advanced clinical skills (2014-2020)

### Origins of Trainees

### Top 10 Training Hospitals (by Number of Trainees)

-  Linkou Chang Gung
-  National Taiwan Uni. Hospital
-  MoHW Taipei Hospital
-  China Medical Uni. Hospital
-  Taipei Veteran Gen. Hospital
-  Kaohsiung Chang Gung
-  Changhua Christian Hospital
-  Far Eastern Memorial Hospital
-  E-DA Hospital
-  Hualien Tzu Chi Hospital

### Number of Trainees in Top 10 Most Popular Training Programs

- Other division training, including Otolaryngology, Traditional Chinese Medicine, Ophthalmology, Metabolism & Endocrinology, Anesthesiology, Cardiovascular Surgery etc.

# Hualien Tzu Chi Hospital

## Southbound Virtual Training Course of Acupuncture and Traditional Chinese Medicine

Traditional Chinese Medicine (TCM) has evolved since it was first used more than 2,000 years ago. Encompassing practices including acupuncture, Tui-Na (Massage), and a variety of herbal remedies. Also, to emphasize the advantages and advancements of TCM in Taiwan, Hualien Tzu Chi Medical Center design a series of webinar training course, that includes the fundamental academic know-how and the application of TCM.

### Duration:

– Course 1: < 7 months / 1 person

### Program fee:

– Free

### Online course:

– Using Cisco Webex for online course

### Meals & other information:

– Equipment requirement: Computer, Cell Phone with camera lens

## Achievements

- Hualien Tzu Chi Medical Center develop the Traditional Chinese Medicine (TCM) Ward. Which has perform the professional treatment for patient.
- We have trained doctors in short term, in the year 2019 .

## Program Details

### Study Objective

1. Familiar with the Traditional Chinese Medicine (TCM) theory.
2. Familiar with the Traditional Chinese Medicine (TCM) clinic establishment.
3. Enable to develop further Traditional Chinese Medicine (TCM) technique.

### Related Skills / Surgical Technique

1. Tui-Na (Massage)
2. Herbal remedies
3. Acupuncture

## Applicant Qualification

- Certificated medical staff.
- Certificate:
  1. Physician Certificate
  2. Medical staff Certificate

# Hualien Tzu Chi Hospital

## Southbound Virtual Training Course of Hematopoietic Stem Cell Transplantation

Hematopoietic stem cell transplantation represents a major soft power in medicine of Taiwan in Asia. The Hematology and Oncology department from Hualien Tzu Chi Medical Center expect to make a contribution in BMT transplantation. In 2021, we design a series of webinar training courses. The courses include the fundamental academic know-how and the application of hematopoietic stem cell transplantation, conducting by professional tutors.

### Duration:

– Course 1: < 7 months / 1 person

### Program fee:

– Free

### Online course:

– Using Cisco Webex for online course

### Meals & other information:

– Equipment requirement: Computer, Cell Phone with camera lens.

## Achievements

- We had conducted several cases of Hematopoietic Stem Cell Transplantation. With the strong support by Tzu Chi Blood Bank.
- We have trained two doctors in long term, from the year 2019 to 2020.

## Program Details

### Study Objective

1. Familiar with the Hematopoietic Stem Cell Transplantation theory.
2. Familiar with the HLA Typing
3. Enable to develop further Hematopoietic Stem Cell Transplantation technique.

### Related Skills / Surgical Technique

1. Hematopoietic Stem Cell Transplantation
2. HLA Typing
3. Cord Blood Banking

## Applicant Qualification

- One year working experience: clinical experiences & 1 year working experience
- Certificate:
  1. Physician Certificate
  2. Medical staff Certificate

# National Taiwan University Hospital Yunlin Branch

## International Emergency Medical Service System EM Resident curriculum and/or EMS fellowship

The emergency medical service (EMS) system is a unique subspecialty in emergency medicine. The EMS team at National Taiwan University Hospital, Yunlin Branch (NTUH-YL) comprised of two prestigious EMS scholars in Taiwan: Prof. Matthew Huei-Ming Ma, and Prof. Wen-Chu Chiang.

Prof. MH-M Ma is the current chairman of the Asian EMS Association (AAEMS), and Prof. W-C Chiang is the current deputy chair of the EMS Committee of the Taiwan Society of Emergency Medicine. Both of them not only participated in the development of a modern EMS system from scratch in Taiwan but also have abundant high-quality research publications in the EMS domain.

Prof. MH-M Ma and A/Prof. W-C Chiang is very well connected with all the major stakeholders and administration of prehospital care in Taiwan and Asia and feels confident that NTUH-YL can provide you an excellent learning experience in EMS.

### Duration:

- Resident curriculum: within 1 month / 2 persons
- EMS fellowship: 1 months ~ 1 year / 1 person

### Program fee:

- Upon discussion

### Online course:

- Using "Google meet" for online course
- need smart phone, IPad or computer

## Program Details

### Study Objective

1. To understand the history and development of EMS worldwide.
2. To perform quality control of prehospital care for patients with time-sensitive acute illness.
3. To conduct well-designed research in EMS field

### Online learning topics

1. Urban and rural advanced practices in prehospital care in Taiwan and worldwide.
2. Registry system for cardiac arrest, critical illness, and acutely injured patients in the EMS system.
3. EMS Study design, data analysis, manuscript writing, and getting published in a high-impact journal.

## Applicant Qualification

- Resident curriculum: has more than or at least equal to 1-year clinical experiences
- EMS fellowship: has more than or at least equal to 3-year clinical experiences

## Contact Point

### International Medical Service Center

## Coronary Intervention Program

Coronary Intervention Team, established in November 2004, is a multidisciplinary team, with cardiologists, cardiovascular surgeons, emergency physicians, physiatrists, radiographers, registered professional nurses, pharmacists, and dietitians involved.

### Duration:

– 1~3 months/2 persons

### Program fee:

– NTD 10,000/month

### Online course:

- Using “Google meet” for online course
- need smart phone, Ipad or computer

## Achievements:

- We accomplished 1,245 coronary interventions, including 106 primary PCI for ST-elevation myocardial infarction, in 2020.
- We had participated in many registries initiated by Taiwan Society of Cardiology, and contributed to the real world researches in Taiwan.
- We started to train coronary interventionist since 2020.

## Program Details

### Study Objective

1. Non-invasive and invasive diagnosis of coronary artery disease.
2. Medical management of coronary artery disease.
3. Interventional therapy of coronary artery disease.

### Online learning topics

1. Essential skills of coronary intervention.
2. Identification, management and avoidance of complications.

## Applicant Qualification

- Has more than 1 year of clinical experience of coronary intervention.

## Contact Point

### International Medical Service Center

Name: Ms. Lin

## Minimal Invasive Gynecologic Surgery (MIS)

The gynecologic team consisted of 6 physicians, experienced in common indications for various MIS platforms, by equipments usually used in local hospitals.

### Duration:

- Course 1: Introduction into MIS, 1 hr
- Course 2: Setting up, 1 hr
- Course 3: Two port-access laparoscopy, 1 hr
- Course 4: Single incision laparoscopy, 1 hr
- Course 5: Specimen removal and maceration, 1 hr

### Program fee:

- NTD 2500/course
- (Surgical equipments NOT included)

### Online course:

- Using "Google meet" for online course

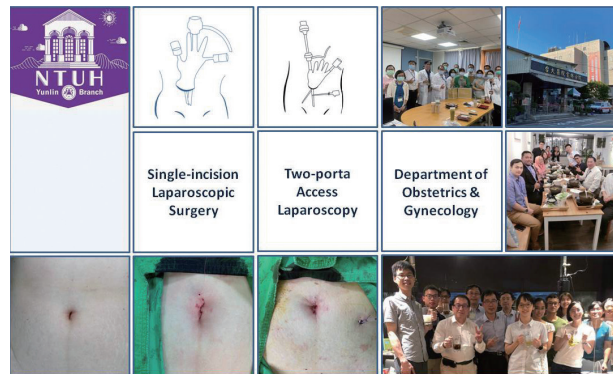

### Meals & other information:

- Equipment requirement: A simulation box, common instruments for MIS and video system. Wound retractor and trocars.

## Achievements

- Our certified and experienced surgeons accomplished most of the gynecologic surgeries in a local hospital with limited medical resource.
- We have several articles regarding conventional laparoscopy (CL), two port-access laparoscopy (TPA) and single incision laparoscopic surgery (SILS) in SCI journals.
- As a teaching hospital, our team members are good and friendly at sharing our experience with students, specialists and friends in Taiwan and around the world.

## Program Details

### Study Objective

1. To set up a simulation MIS platform
2. To know CL, TPA and SILS from basics to details, and the strengths and limitations of each platform.

### Related Skills / Surgical Technique

1. Adnexectomy, oophoro-cystectomy, hysterectomy, staging surgery, myomectomy in MIS.

## Applicant Qualification

- Completed the formal requirements of an international medical school
- Passed national exam of home country
- At least 1 year of surgical experience in gynecologic field

## Contact Point

## Capacity Building for Dementia Long-term Care Giver (Thai)

Brain Drain occurs most commonly in developing countries. To strengthen the clinical skills and professional knowledge of health care, CCH has been carrying out overseas medical staff training includes onsite case discussion, online courses, and study tours. The training program is customized for medical professionals with content tailored specifically to their needs.

Since the outbreak of the COVID-19 pandemic, the training was transformed into online courses to continue providing the knowledge and case study for the medical staff eager to improve medical care. Our online courses cover medical diseases to long-term care with experts in different fields. Welcome to your online learning journey.

In this series online courses, there are 8 topics, included the Dementia Care Model, Assessment Tools, Evaluation Tools, Family and Community Supporting Group, Traditional Chinese Medicine Intervention, Dementia Day Care Center and Thai Traditional and Alternative Medicine Intervention etc..

### Duration:

- Available on CCH Online Courses platform.
- <https://cchonlinecoursesen.webnode.tw/long-termcare-thaiversion/>

### Program fee:

- Free

### Online course:

- YouTube ( <https://reurl.cc/q1vYvD> )

### Meals & other information:

- E-Certificate is available, if you watch all of the Online Courses and finish post-test & satisfaction survey.

## Program Details

### Study Objective

1. To build the concept of Dementia Long-term Care Innovative Model.
2. To explain the screening and evaluation tools for dementia.
3. To define the importance of family and community supporting for dementia.
4. To describe the role of Traditional Chinese Medicine and Thai Traditional and Alternative Medicine in Long-term Care.
5. To apply the management of Dementia Day Care Center.

## Applicant Qualification

- Has more than 3 years clinical experience & more than one year working experience

# Landseed International Hospital

## Landseed Sports Medicine Specialist Training Program

The program is the most professional sports medicine training course in Taiwan and the most comprehensive sports medicine specialists training system in Asia.

Landseed International Hospital is a large-scale hospital that has been awarded first-class evaluations by Taiwan hospitals and teaching hospitals accreditation. We have advanced medical equipment and excellent medical technology. The team of professional doctors comes from major medical centers.

Landseed International Hospital continues to devote itself to the national team's medical care for players, and in 1993 the first Landseed Sports Medicine Center was established to integrate all-round services of medical treatment, training, and testing.

### Duration:

- Fundamental Courses: 80hrs
- Advanced Courses: 30hrs
- Practice Workshop: 100hrs
- We provide customized course series
- More than 20 people sign up to start the course.

### Online course:

- Using Video conferencing application for online course.

### Program fee:

- Upon discussion

### Meals & other information:

- Equipment requirement: Internet, microphone, headset.

## Program Details

### Study Objective

1. To train sports medicine specialists.

### Related Skills / Surgical Technique

1. Sports Science
2. Internal Medicine
3. Sports injuries in specific sports
4. Sports Management
5. Taping
6. Medical Imaging
7. Acupuncture

## Applicant Qualification

- Physicians who have a specialist certificate and are interested in sports medicine.
- Practitioners in related fields who are not physicians and are interested in sports medicine.

# Kaohsiung Municipal Kai-Syuan Psychiatric Hospital

## International Mental Health Training Course

Kai-Syuan Psychiatric hospital is accreditation as a psychiatric teaching hospital by the Ministry of Education and Ministry of Health and Welfare and the meanwhile is appointed as the core psychiatric hospital in the Kaohsiung Metropolitan Area. Besides the implementation of the National Mental Health policy, the promotion of the Community Rehabilitations/activities and the propagation of mental health are always the efforts and the targets to be pursued. Through the comprehensive psychiatric services systems, we can promote the mental health for the citizens. If the psychiatric symptoms can be detected the early stage and psychiatric intervention (include earlier rehabilitation), we promise to provide the citizens with complete mental health care.

### Duration:

- Course A: 2 weeks / 5-10 person
- Course B: 1 month / 5-10 person

### Program fee:

- Course A : NTD 7,500 / course
- Course B : NTD 15,000 / course

## Program Details

### Study Objective

1. Model of Occupational Therapy Intervention in Kai-Syuan Hospital
2. Kai-Syuan Psychiatric Hospital Nursing Care System
3. Hospital Medical Management
4. Clinical Psychology Service
5. Kai-Syuan Model Psychiatric Social Work

### Related Skills / Surgical Technique

- 1.Rehabilitation Clinical Practice
- 2.Psychological Balance
- 3.Medical Management

## Applicant Qualification

- Has more than 1 year Mental Health experience.
- Has more than 1 year work-ing experience.

## Contact Point

## Achievements

- After our professional rehabilitation treatment, we had counseled 55 cases in 2018, 59 cases in 2019 successfully return to the work.
- Since 2008, we start to train the overseas Mental Health Medical staff, in-cluding Vietnam, Thailand, Cambodia, Philippines, Indonesia, Myanmar etc. In 2018, we have set up the International Mental Health Training Center Taiwan (IMHTCT) to provide more professional training courses, and we have trained more than 800 medical staff all over the world.

# Cardiovascular Treatment

Cardiac surgeons at Taiwan's hospital are superior at heart transplantation and other cardiovascular surgeries. Statistically, Taiwan performs more than 5,000 cardiac diagnostics and treatment procedures per year, including 100 heart transplantation cases, numerous CABG, valve replacement, cardiac catheterization, stent cases and etc.

The success rate of coronary artery stent implantation is up to 99% in Taiwan. Besides, Taiwan also established the first team in the world to perform auto-heart transplantation surgeries. Medical professionals in Taiwan also have abundant experience in radiofrequency catheter ablation treatment for arrhythmia, coronary artery disease treatment, percutaneous coronary intervention (PCI) and cardiovascular health examination.

## Cardiovascular Treatment Training Program

No	Hospital Name	Program Name	Program Duration Zone	Program Fee	Page

## Peripheral Endovascular Training Course

Cardio-vascular Surgery Team has been established since March 1, 2013. All members of CVS Team have been regularly invited to foreign country for experience sharing and academic communication. We aim at establishing World-class Vascular access Center and is proud to be the leading model for excellent Vascular Center in Asia Pacific.

### Duration:

- Course 1: < 1 month/ 1 person
- Course 2: 3~12 months/ 2 person

### Accommodation:

- Additional fee, NTD 3,000 / month

### Program fee:

- Course: NTD 35,000/ month

## Achievements

- CVS Team have involved in peripheral vessel intervention, dysfunction AV access intervention, carotid and aortic intervention, peripheral artery and advanced cardiac surgery and achieved enormous clinical experience and good clinical results.
- The team had many experience in AV access intervention, including central vein and cephalic arch together with tertiary AV access creation. The team also had leading experience in deep venous intervention
- We have trained more than 6 surgeons and interventional nephrologist from all over the world.

## Program Details

### Study Objective

1. Venous Intervention
2. Aortic Intervention
3. AV access creation and Intervention
4. Peripheral artery intervention

### Related Skills / Surgical Technique

1. Complex Aortic Intervention
2. Peripheral artery intervention (Lower extremities)
3. Venous and AV access intervention

## Applicant Qualification

- Has more than 1 year clinical experiences & more than 1 year working experience
- Applicant's profile will be assessed

## Transcatheter Heart Valve Intervention Program

Established in 1994 and led by Professor Jeng Wei, the Heart Center of Cheng Hsin is proud of having a strong heart team of cardiac surgeons and cardiologists, sparing no efforts to improve the quality of medical services and to develop the level of the professional competences. Over the past two decades, we have been putting into resources to upgrade surgical and medical equipment and dedicated to provide sophisticated, highly-effective techniques and treatments, including the transcatheter heart valve interventions.

### Duration:

- Basic course 1: <1 week / 5-10 persons
- Basic course 2: <1 month/person
- Advanced course 1: <1 week / 5-10 persons
- Advanced course 2: <1 month/person

### Program fee:

- Basic course (physicians): NTD 15,000/day
- Basic course (paramedics): NTD 10,000/day
- Advanced course (physicians): NTD 10,000/day
- Advanced course (paramedics): NTD 6,000/day

### Accommodation:

- None

### Meals & other information:

- Offering lunch

## Program Details

### Study Objective

1. Heart team approach, including patient selection and screening
2. Pre-procedural planning, including device selection and sizing, etc.
3. Vascular access: Transfemoral and alternative accesses
4. TAVR, MitraClip, and other transcatheter procedures
5. Intra-operative monitoring
6. Trouble-shooting and management of complications
7. Post-operative care and follow-up

### Related Skills / Surgical Technique

1. Heart team approach for THVI
2. Transfemoral and/or transapical TAVR procedures with balloon-expandable (Edwards Sapien 3) and/or self-expanding (Medtronic Evolut-R or Abbott Portico) devices
3. Transfemoral MitraClip (Abbott) procedure
4. Trouble-shooting and management of complications

## Applicant Qualification

- Additional fee, different programs (basic and advanced course) to meet the needs of applicants are provided.
- New comers or experienced implanters are welcomed.
- We encourage the applicants to apply as heart teams.

## Contact Point

### Telehealth and International Medical Services Center

Name: Ms. Lin

## Achievements

- Transcatheter aortic valve replacement (TAVR) was introduced in Taiwan in 2012. Nowadays, our team has performed more than 734 cases of transcatheter heart valve interventions (THVI), including TAVR, MitraClip, etc., in addition to conventional valve surgeries and has become one of the largest THVI centers in Asia. In general, the procedural success rate at our institution is > 98%.
- Our research team has published extensively in the fields of transcatheter heart valve interventions, cardiac surgery, heart failure, coronary artery disease, and echocardiography. More than 200 publications have been published in peer-reviewed high-ranking SCI journals.
- We have trained more than 100 surgeons, cardiologist, technicians, and nurses all over the world.

# Cheng Hsin General Hospital

## Mitral Valve Repair Training Program

Established in 1994 and led by Professor Jeng Wei, the Heart Center of Cheng Hsin General Hospital is proud of having a strong heart team of cardiac surgeons and cardiologists, sparing no efforts to improve the quality of medical services and to develop the level of the professional competences. Over the past two decades, we have been putting into resources to upgrade surgical and medical equipment and dedicated to provide sophisticated, highly-effective techniques and treatments, including the mitral valve repair.

### Duration:

- Course 1: <1 week / 8 persons
- Course 2: <1 week / person

### Program fee:

- 2-day course (1 cardiac surgeon, echocardiographer, perfusionist, anesthesiologist): NTD 100,000/day
- Individual (cardiac surgeon) NTD 50,000/day
- Individual (echocardiographer or perfusionist or anesthesiologist): 30,000/day.
- 7-day course (heart team of 4 members): NTD 500,000/week

### Accommodation:

- None

### Meals & other information:

- Offering lunch

## Program Details

### Study Objective

1. Heart team approach, including cardiac surgeon, cardiologist, echocardiographer, anesthesiologist, pulmonologist and physical rehabilitation specialist.
2. Pre-operative evaluation and planning.
3. Surgical techniques for mitral valve repair.
4. Post-operative care and follow-up

### Related Skills / Surgical Technique

1. Heart team approach for mitral valve repair.
2. Pre-operative evaluation and planning.
3. Surgical techniques for mitral valve repair.

## Applicant Qualification

- Additional fee, new comers or experienced are welcomed. For surgeon, we recommend he or she has operated more than 30 cases of conventional cardiac surgery.
- We encourage the applicants to apply as heart team.

## Contact Point

## Achievements

- We have performed 236 cases of mitral valve surgery in 2020 and 1178 cases of mitral valve surgery in recent 5 years.
- Our research team has published extensively in the fields of cardiac surgery, heart transplantation, heart failure, coronary artery disease, and echocardiography. More than 200 publications have been published in peer-reviewed high-ranking SCI journals.
- We are experience in training different aspects of cardiac surgery and cardiology. There are more than 100 surgeons, cardiologist, technicians, and nurses all over the world have undergone our training courses so far.

# National Taiwan University Hospital, Hsin-Chu Branch

## Endovascular Thrombectomy of Dialysis Vascular Access

Our endovascular team for hemodialysis, established in 1997, served for more than 1,200 procedures for dialysis vascular access per year. We provided timely thrombectomy service within 24 hours after thrombosis occurred and nearly 400 thrombosed access was salvaged per year. We accomplished clinical study, animal study, and clinical trial in dialysis vascular access and were awarded by the Bronze medal of Symbol of National Quality (SNQ) in Taiwan.

**Duration:**

– Course: 2 week/per person

**Program fee:**

– Course: NTD 3000/week

**Accommodation:**

– Additional fee, NTD 4200/week

### Program Details

#### Study Objective

1. Endovascular thrombectomy of totally occluded graft vascular accesses
2. Endovascular thrombectomy of totally occluded native vascular access
3. Endovascular intervention of immature vascular access

#### Related Skills / Surgical Technique

1. Mechanical thrombectomy devices
2. Stent graft implantation
3. Drug-coated balloon angioplasty

### Applicant Qualification

- More than one year clinical experiences in nephrology, cardiology, vascular surgery, or interventional radiology specialty.
- Basic training or knowledge in interventional radiology procedures

### Contact Point

#### International Patient Service Center

Name: Ms. Lo Yi-ting

E-mail: tina\_lo@hch.gov.tw

Tel: +886-3-5205604 ext.8883

Website: www.hch.gov.tw

### Achievements

- The success rate was 99% for graft access and 95% for native access. The median procedure time was 33 mins for graft access and 38 mins for native access. Our post-procedural primary patency rates were better than the threshold suggested by guidelines.
- More than 30 research papers focusing on the issues of dialysis vascular access
- We have trained more than 10 fellowships in recent two years.

# Far Eastern Memorial Hospital

## Cardiovascular Surgery

We have performed more than eight-thousand cardiac operations, including CABG, valve surgery, and heart transplants. The core competencies of our team at FEMH are off-pump coronary artery bypass (OPCAB) and minimally invasive cardiac surgery (MICS). More than 85% of the isolated CABG procedures performed were OPCAB. More than 90% of valve procedures are performed via the sternum-sparing approach (MICS). Currently, more than 50% CABG is sternum-sparing. Also, FEMH is considered a leader in endoscopic vessel harvest (EVH) procedures and has been the premier training center in Asia. More than hundred foreign cardiac surgeons have been to FEMH for EVH and MICS training.

**Duration:**  
- 1-3months

**Accommodation:**  
- Additional fee, NTD 2,000/week(dorm)

**Program fee:**  
- NTD 30,000/month

**Meals & other information:**  
- None

### Achievements

- We received I.B.M.I "National Innovation" Prize, "SNQ" Symbol of National Quality, "CAD Care Certification", and "Heart Failure Care Certification".

### Program Details

#### Study Objective

1. Minimally Invasive surgery techniques

#### Related Skills / Surgical Technique

1. Minimally Invasive Cardiac Surgery (MICS)

### Applicant Qualification

- We will assess applicant's profile

# Taichung Veterans General Hospital

## Clinical Cardiovascular Interventional Therapy Program

The Interventional Division of the Cardiovascular Center of Taichung Veterans General Hospital (TCVGH), led by Professors Yun-Chin Fu and Wen-Lieng Lee, is a multidisciplinary team that comprises 10 highly-experienced interventional cardiology specialists and provides state-of-the-art diagnosis and treatment for all categories of structural and vascular diseases of the cardiovascular system, with patient amount and disease complexity the exclusive leader in the middle territory of Taiwan.

### Duration:

– Course: 3 months/ 4 persons

### Program fee:

– Course: NTD 2,000/ day

### Accommodation:

– Additional fee, NTD 1,200/day

## Program Details

### Study Objective

1. Differential diagnosis, patient selection, and preoperative planning
2. Interventional techniques
3. Postoperative care and rehabilitation program

### Related Skills / Surgical Technique

1. Coronary interventions for CHIP, CTO, ACS cases.
2. Peripheral arterial and venous interventions.
3. Interventions for valvular heart disease- TAVI, Mitraclip, PTMC, PTAV, BAV.
4. Interventions for congenital heart diseases- ASD, VSD, PDA transcatheter closure.

## Applicant Qualification

- Physician

## Contact Point

### International Patient Service Center, Cardiovascular Center Taichung Veterans General Hospital

Name: Miss Chen

E-mail: cpyau@vghtc.gov.tw

Tel: +886-4-2359-2525 ext.3124

## Achievements

- For coronary artery disease, we treated averagely 1,500 patients per year by percutaneous coronary interventions, many of whom were CHIP, ACS, CTO, calcified or high Syntax score cases, using pioneering techniques, therapeutic devices and imaging systems, with excellent patient outcome above international standards.
- For peripheral vascular disease, we treated averagely 200 patients yearly, including those with acute and chronic arterial/venous/pulmonary arterial diseases using innovative atherectomy and thrombectomy devices. The limb salvage rate for critically ischemic limbs is above 80% in our center.
- For adult structural heart disease, we have successfully completed nearly 100 TAVI and 30 Mitraclip cases within the past 2 years. Interventional specialists of our center are also skillful in PTMC, PTPV and BAV for management of diverse valvular heart diseases.
- For congenital heart disease, our pediatric cardiologist Professors Fu is the pioneer in transcatheter treatment of the most complicated ASD, VSD, PDAas well as PS and AS in the Asian-Pacific region. Our adult cardiologist can also treat congenital heart diseases using interventional techniques in based on patient-oriented style.

# Taipei Veterans General Hospital

## Clinical Cardiac Electrophysiology Program

The cardiac electrophysiology laboratory, led by Professor Shih-Ann Chen, is a multidisciplinary team. We provide state-of-the-art and patient-oriented diagnosis and treatment of heart rhythm disorders while maintaining a regional, national, and international leadership role in advancing cardiac arrhythmia research, education, and health care delivery standards.

### Duration:

– Course: 1~2 years/3~4 person.

### Program fee:

– NTD 1,500 / Administration fee.

### Accommodation:

– Shared room NTD 3,400 / month.  
– Single room NTD 500 / day.

### Meals & other information:

– Employee restaurant: NTD 55 / per meal.

## Program Details

### Study Objective

1. Basic mechanisms of arrhythmias from clinical electrophysiological and basic animal studies.
2. A practical approach to clinical electrophysiology.
3. Interpretation of intracardiac tracing and differential pacing maneuvers.
4. Ablation of arrhythmias.
5. Paper reading and writing skills.

### Related Skills / Surgical Technique

1. Interpretation of intracardiac tracings and pacing maneuvers.
2. Ablation of atrial fibrillation, supraventricular/ventricular arrhythmias.
3. Placement of permanent pacemaker/intracardiac defibrillator/cardiac resynchronization therapy-pacemaker or -defibrillator.

## Applicant Qualification

- The applicant should have more than three years of clinical experience in cardiology.
- Each EP fellow will be given at least one clinical research project to carry out during the training program. Applicant fellows should have the ability to complete research under the supervision of an attending physician.

## Contact Point

### Director of Heart Rhythm Center, Division of Cardiology, Department of Medicine, Taipei Veterans General Hospital

Name: Professor Li-Wei Lo

E-mail: lwlo@vghtpe.gov.tw

## Achievements

- The database is near 4,500 cases for atrial fibrillation/atrial flutter ablation in recent 20 years and near 1000 patients for ventricular arrhythmia (VA) ablation (1/4 substrate VA) in recent 10 years. The success rate of cardiac arrhythmia ablation (1-year AF-free rate, Taipei Veterans General Hospital: paroxysmal: 84.3%, persistent: 70.6%; global: paroxysmal: 74.9%, persistent: 64.8%; acute success for VA ablation: 90.2%) in our laboratory is higher than many well-known international centers, and our procedure-related complication rate is lower than the published international registry data (complication rate: Taipei Veterans General Hospital: 2.59%; global: 4.54%).
- The team members have discovered numerous novel electrophysiologic mechanisms and ablation techniques for arrhythmia treatment. This team has made an outstanding academic achievement (circulation: 31 articles; JACC: 29 articles; book chapter: 40 sections) and has been recognized as an international pioneer and leader in the field of radiofrequency ablation of arrhythmia.
- This team attracts over two hundred international doctors from not only the Asia Pacific region but also the USA and Europe, being trained to learn the skills and techniques of catheter ablation.

## Achievements

- We had performed over 2000 cases of laparo-endoscopic single-site surgeries since 2011.

## Academic Research:

- Chang Y, Kay N, Huang MR, Huang SJ, Tsai EM. Laparoendoscopic Single-Site Supracervical Hysterectomy with Manual Morcellation: A Retrospective Study. J Minim Invasive Gynecol. 2018;25:1094-1100.

## Training Experience:

- We have trained 6 surgeons from all over the world.

# Changhua Christian Hospital

## Reproductive Medicine

CCH's Reproductive Medicine Center is the in-vitro fertilization (IVF) institution granted with Symbol of National Quality and accredited by the College of American Pathologists (CAP). The multi-disciplinary comprehensive infertility treatment is performed by the professional, quality medical research team led by Prof. Hong-Der Tsai, former President of the Taiwan Association of Obstetrics and Gynecology.

**Duration:**  
– 1-6 months

**Program fee:**  
– USD \$ 100/week

**Accommodation:**  
– Excluded in training fee  
– Available to assist dormitory or hotel arrangement

**Meals & other information**  
– Transportation : Airport pick up service is available  
– Meals : meals is excluded in training fee

## Achievements

- The high IVF pregnancy rate of 50% in CCH surpassed worldwide standards; moreover, with support from the Center for Medical Genetics certified by Symbol of National Quality and CAP, the team assists infertile couples to have their outstanding babies.

## Program Details

### Study Objective

1. IUI
2. IVF-ET
3. GIFT
4. TET
5. ICSI

### Related Skills / Surgical Technique

1. ICSI, Intracytoplasmic sperm injection
2. PESA, Percutaneous Epididymal sperm Aspiration

## Urogynecology and Endoscopic Surgery

The Department of Obstetrics and Gynecology has established a subspecialty of urogynecology and endoscopy for more than three years. We perform approximately 80 pelvic reconstruction operations, 70 urinary incontinence operations, 100 laparoscopic hysterectomy operations, and 230 surgical laparoscopic surgeries a year. Among them, there have been more than 100 cases of natural orifice transluminal endoscopic surgery. We have also published several papers on pelvic reconstruction surgery and laparoscopic surgery.

### Duration:

- Course 1: < 1 month/ 2 person
- Course 2: 3 months ~1 year/ 2 person

### Accommodation:

- Additional fee,
- Suite: NTD 700/day
- Twin room: NTD 1,000/month

### Program fee:

- Upon discussion

### Meals & other information:

- Cafeteria provides vegetarian meals
- English, Chinese taught

## Program Details

### Study Objective

1. Understand the pathophysiology of Pelvic Organ Prolapse (POP) and learn these correctional surgery.
2. Learn the urinary incontinence surgery
3. Learn the role of Video Urodynamic Study (VUDS) in diagnosing the LUTS and interpreting the results.
4. Improving skills in minimal invasive surgery

### Related Skills / Surgical Technique

1. Laparoscopic sacrocolpopexy or sacrohysteropexy
2. Stress urinary incontinence surgery (TVT - retropubic approach or trans-obturator approach or single incision sling surgery)
3. Natural Orifices Transluminal Endoscopic Surgery (NOTES) – hysterectomy etc

## Applicant Qualification

- A gynecology attending physician who had experiences at least 2 years

# Neurosurgery & Neurology

The surgery survival rate is higher than 99% in Taiwan, and only 2.6% cases suffered from recoverable complications, whilst no patients had permanent neural damage.

Besides, many hospitals in Taiwan have Symbol of National Quality (SNQ) certificate of their navigation surgery system or surgery platform, which guarantee the safety and quality of the operation room. Some hospitals in Taiwan even have cutting-edge technology which applied virtual reality (VR) in neurosurgery training.

# En Chu Kong Hospital

## Training Program of Acute Ischaemic Stroke Treatment

En Chu Kong hospital is a community hospital where the stroke is one of the most common clinical disorders. Neurologists in our hospital can provide acute stroke treatment 24 hours a day, 7 days a week. Our stroke team is major in the treatment of acute ischemic stroke.

### Duration:

– Course 1: < 1 month/ 2 person

### Program fee:

– NTD 10,000/month

### Accommodation:

– None

## Program Details

### Study Objective

1. Preparation of ER staff and neurologists when a stroke code was started by EMT or triage.
2. Interpretation of multi-modality neuroimaging study, including plain head CT, CT angiography, CT perfusion, MRI, MRA, MR perfusion, to choose the way of treatment.
3. The procedure of IV rt-PA treatment or IA thrombectomy if patient is indicated.
4. The neurocritical care patients for acute ischemic stroke in intensive care unit.
5. How to take care of patients with acute ischemic stroke in general ward.

### Related Skills / Surgical Technique

1. To make a correct interpretation of neuroimaging findings.
2. To learn how to monitor cerebral hemodynamic condition in intensive care unit.
3. To learn the procedure of IA thrombectomy.

## Applicant Qualification

- Neurologist who has more than 3 years clinical experiences & more than 1 year working experience

## Contact Point

### International Patient Service Center

Name: Chien Jung-Lu

E-mail: [chienjung.lu@gmail.com](mailto:chienjung.lu@gmail.com)

Tel: +886-2-2672-3456 ext. 6548

## Achievements

- We manage more than 300 patients with acute ischemic stroke every year.
- Six to 7 percent of them accepted rt-PA thrombolytic therapy. We also have an experienced neurologist to do IA thrombectomy.
- Hai-Jui Chu, et al. Endovascular thrombectomy for acute ischemic stroke: A single-center experience in Taiwan. Journal of the Formosan Medical Association 2018; 117 (9): 806-13
- We can train the whole team to do treatment of acute ischemic stroke. Welcome if you are interested in this challenging treatment.

# Shin Kong Wu Ho Su Memorial Hospital

## Surgical Program of Spine

We do more than 600 spine surgeries per year at our department. A never ending flow of patients is resulted from our skillful techniques. The successful rate of our spine surgery is more than 95%. The morbidity and mortality rates are less than 1%.

### Duration:

– Course: 6 months ~ 1 year/ 2 persons

### Program fee:

– NTD 3,000/day  
– NTD 10,000/week  
– NTD 30,000/month

### Accommodation:

– Additional fee, NTD 3700 /month

## Achievements

- Our spine team also has published lots of papers on famous journals in the world.
- Many surgeons from all around the world visited our department to observe our spine surgeries.

## Program Details

### Study Objective

1. Precise localization and diagnosis for spine
2. Surgical plans for spine diseases.
3. Surgical techniques.

### Related Skills / Surgical Technique

1. Minimal invasive techniques of spine surgery.
2. Microscope and endoscope application for spine surgery.
3. Implantation of spine surgery.

## Applicant Qualification

- Has more than 2 years of experience performing spine surgery

## Contact Point

## Neurocritical Care Training Program

Our neurosurgical intensive care unit (NSICU) established in 1988. Currently, we have a bed modernized unit, which have the capabilities of caring all neurocritical illness patients.

### Duration:

– Course: 3 ~ 6 months / 2 person

### Accommodation:

– Additional fee, NTD 5000 / week

### Program fee:

– Course : NTD 30,000/ Month

## Program Details

### Study Objective

1. Basic pathophysiology of acute brain injury (ABI)
2. Basic principles of neurocritical care
3. Implementation of Target Temperature Management, including fever control
4. Multimodality brain monitoring

### Related Skills / Surgical Technique

1. Transcranial Doppler
2. Continuous electroencephalogram
3. Intravascular & Surface cooling techniques

## Applicant Qualification

- At least 2 years' experience in critical care, all different health professionals are welcome
- Better with the experience in surgical intensive care unit or neurology related categories.

## Contact Point

### Department of neurosurgery

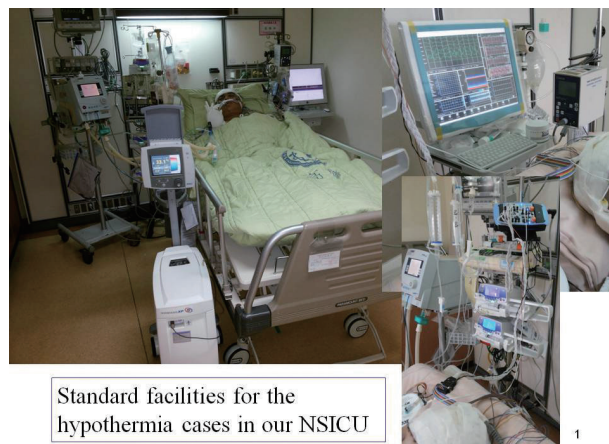

Name: Ms. Sun

E-mail: wherefun53@gmail.com

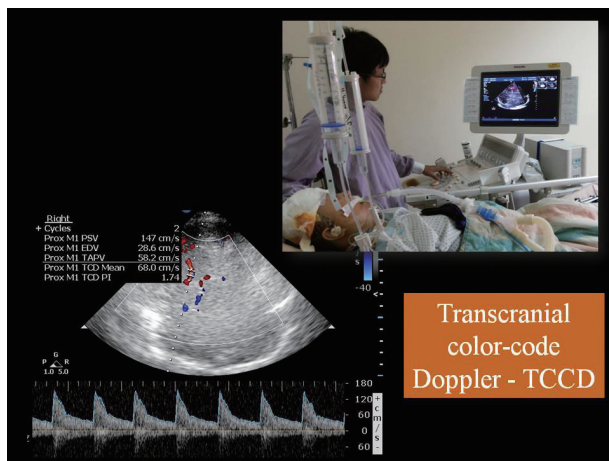

Tel: +886-7-3121101 ext.5875

## Achievements

- The target temperature management is implement in our unit more than 8 years. The good grade GOS (Glasgow outcome scale) of 3rd and 6th month in all cases, improving from 10.3% to 23.9% respectively. The gross mortality in our unit are lesser than 10% in recent 2 years.
- In recent years, we have the arranged the neurocritical care training programs all over Taiwan and the Kaohsiung therapeutic hypothermia forum for all healthcare practitioner.
- We have the experienced in training different field of healthcare practitioner, including physician, nurse or even students, from different countries of the world.

Standard facilities for the hypothermia cases in our NSICU

color-code  
Doppler - TCCD

Daily ward round

# Cathay General Hospital

## Neurosurgery training program

There are over 1200 cases of spinal surgery each year in our hospital. The surgery includes about 300 cases of cervical, 800 of lumbar spine surgery, and other spine surgery, such as spinal tumor and AVM.

The number of cerebrovascular surgery and interventional neuroradiology is about 40 and 60 cases per year respectively. Acute stroke treatment, which becomes popular worldwide in recent years, is also our main topic for training. We use hybrid OR to approach cerebrovascular diseases, and this hybrid approach is a newly-developed neurosurgical field worldwide.

Our hospital is one of the tertiary traumatic care centers in Taipei. Our neurotrauma cases are 10-20 per month. Comprehensive traumatic care and operation was the main learning goal. Neurocritical care in the ICU was another main subject for training.

### Duration:

- Course 1: 3 months/ 3person
- Course 2: 1year/ 1 person

### Program fee:

- Course: NTD 20,000/month

### Accommodation:

- Included in program fee already
- Offering lunch , dinner and lunch box

### Meals & other information:

- Offering lunch , dinner and lunch box

## Program Details

### Study Objective

1. Spine surgery/ ACD, ADR, Laminoplasty, Laminectomy with instrument, lateral mass screws, pedicle screws. Spinal tumor, AVM, Minimally invasive surgery, endoscope surgery, radiofrequency
2. Aneurysm clipping/coiling, AVM surgery/ embolization, IA thrombectomy for acute stroke, Balloon angioplasty/Stenting for intracranial arterial stenosis, Cerebrovascular bypass surgery
3. Neurocritical care in ICU, Surgery for traumatic brain injury

## Applicant Qualification

- Spinal surgery, well training is better
- Cerebrovascular surgery or Interventional neuroradiology
- Neurotraumatology

## Contact Point

# Taipei Medical University, Shuang Ho Hospital, Ministry of Health and Welfare

## ROSA Robot Training Program

With minimally invasive and microscopic techniques, we provide the treatment on neuropathy such as painfulness caused by cervical vertebrae, thoracic vertebrae, lumbar disc herniation, spinal dislocation or stenosis, and provides surgery for spinal emergency trauma, degenerative spinal disease, and endoscopic treatment.

### Duration:

- Short-time training: < 1 months/ 2 person
- Long-time training: 3 months ~1 year/ 2 person

### Program fee:

- Attending Physician: NTD 7,900/day
- Fellow: NTD 5,600/day
- Resident/Nurse/Others: NTD 4,000/day

### Accommodation:

- can assist to arrange

### Meals & other information:

- Administrative fee NTD 3,000/person

## Achievements

- We had conducted over 700 cases. The surgery success rates are 100%, 99% precision.
- Many groups have visited our department.

## Program Details

### Study Objective

1. ROSA
2. Spinal micro-endoscopy
3. Minimally invasive discectomy surgery
4. Steel elastic nail fixation

### Related Skills / Surgical Technique

1. ROSA
2. Spinal micro-endoscopy
3. Minimally invasive discectomy surgery
4. Steel elastic nail fixation

## Applicant Qualification

- More than 1 year of clinical working experience.

## Contact Point

# Organ Transplant

Taiwan's hospitals have good 3-year survival rates for organ transplant, which surpass the average of the world. For example, the 3-year survival rates of liver transplant is 91% in Taiwan, whilst the average of the world is around 78%.

Besides, other organ transplant also hits its record in Taiwan, like the 3-year survival rates of kidney transplant is 98%, the 3-year survival rates of heart transplant is 87%, and the 3-year survival rates of lung transplant is 51%.

## Orthopedics Training Program

# Chi Mei Hospital

## Renal Transplant Surgery

Chi Mei Hospital began performing transplants in 1999. Since 2007, We providing multidiscipline team care in clinic. Patient could receive consultation from physician, pharmacist, dietician, and coordinator at once, which could improve the quality of care after transplantation. The ministry of health and welfare has certified one of the six “Grade A award” (2013) hospital.

**Duration:**

- Course 1: < 1 months, 3 person/per year
- Course 2: 3 months ~1 year, 3 person/per year

**Program fee:**

- NTD 15,000/month

**Accommodation:**

- None

## Achievements

- Since 1999~2018, It has performed 191 kidney transplants, with a 5-year survival rate of more than 90%.

## Program Details

### Study Objective

1. Renal transplant skill and knowledge and surgery .
2. Multidisciplinary team care for renal transplant patient

### Related Skills / Surgical Technique

1. Pre-transplant evaluation
2. In-patient and Out-patient care

## Applicant Qualification

- Experience of transplant surgery or patient care(Optimal)
- Speak English

## Contact Point

## Liver Transplantation

Trainees learn innovative surgical techniques for living donor transplantation and post-operative care at the Organ Transplantation Center at CMUH: The team has pioneered techniques in living donor hepatectomy able to identify the middle hepatic vein and preserve each branch, called the Rooftop and Skeletonization technique. This original technique can decrease the recipient's hospitalization days and complications rate, as well as decrease living donor complication rates. The team also specializes in using PTFE graft in MHV reconstruction. In hepatic outflow reconstruction, we invented the Raising-flap Technique able to prevent graft outflow from being compromised.

**Duration:**

– <1 year / 2 person

**Program fee:**

– NTD 10,000/month

**Accommodation:**

– Lodging and meals not included

### Achievements:

- During hepatic artery reconstruction, we use surgical loupes instead of microscopes, a unique procedure published in 2017 with the lowest complication rates in all published articles in the world. The team also developed original protocols in early use of immunosuppression agent, mTOR inhibitors, as part of a global multi-center clinical trial in 2015.
- Prof. Long-Bin Jeng has trained foreign doctors from Japan, India, Greece, Mexico, and Armenia. Transplantation teams from Southeast Asia also visit our hospital and learn our surgical techniques and post-transplantation care.

### Program Details

#### Study Objective

1. Learn pre-transplantation patient and living donor selection and post-transplantation care.
2. Learn transplantation surgical techniques.
3. Knowledge on the use of immunosuppression agents and identify related complications.
4. Identify patients' long-term complications, including rejection, infection, de novo malignancy, etc., and proper treatment.

### Applicant Qualification

- More than 3 years of clinical experience
- Valid Physician/Medical License

### Contact Point

## Small Bowel Transplantation Program

The Intestinal Transplantation Team, established on July 2005, is a multidisciplinary team. The team mission is to establish intestinal transplantation and other services for patients with intestinal failure. We accomplished animal study, clinical trial, and applied as the first and only small bowel transplantation team in Taiwan.

### Duration:

- 1~4months / 2 person

### Accommodation:

- Additional fee, NTD 2,000 / week

### Program fee:

- NTD 30,000/month

### Meals & other information:

- Not included meals.

## Achievements

- We had conducted 29 cases of small bowel transplantation and has 60% cumulated 5-year survival, which is comparable to the major center in the United States.
- The research team also has a lot of discoveries and publication in intestinal stem cells, reperfusion injury and immune tolerance experiment.
- Our team also provide the same central venous using in multiple Hickmann catheter replacement. This technique can preserve more central veins for bowel failure patient lifelong use.

## Program Details

### Study Objective

1. pre-transplantation patient evaluation, living donor selection & post-transplantation patient care
2. transplantation surgical technique.
3. immune suppression agent usage & related complications

### Related Skills / Surgical Technique

1. Small Bowel Transplantation
2. Bowel and vessel anastomosis.
3. Central venous catheter replacement.

## Applicant Qualification

- Surgical fellow
- Pediatric surgeon

## Contact Point

## Liver Transplantation

KCGMH is home to the country's leading Liver Transplant Center. Its Director, Professor Chao-Long Chen, performed the first successful liver transplant in Asia in 1984. The center is staffed by highly trained professionals in the field of liver transplantation which include surgeons, anesthesiologists, radiologists, internists, nurses and researchers all equipped with state-of-the-art technologies and facilities.

### Duration:

- Course 1: 3 months/ person
- Course 2: 6 months/ person
- Course 3: >1 year/ person

### Program fee:

- Free

### Accommodation:

- Free of charge single's dormitory

## Program Details

### Study Objective

The program provides training in

1. the surgical management of liver, pancreas and biliary diseases.
2. liver graft procurement for both deceased and living donor transplantation
3. the management of liver transplant recipients, including indications, complications, immunosuppression, and surveillance.
4. the care and management of critically ill patients (Liver ICU)

### Related Skills / Surgical Technique

1. Comprehensive management (pre-operative, intra-operative, post-operative) of liver transplant and HPB patients.
2. Advanced surgical techniques and strategies for liver diseases
3. Different diagnostic and therapeutic modalities

## Applicant Qualification

- The applicant must have fulfilled the requirements for completing a general surgery residency or its equivalent in an accredited and reputable institution
- The applicant must be of good moral character, physically and mentally fit.

## Contact Point

### Liver Transplant Center

E-mail: tai22@cgmh.org.tw

Tel: +886-7-7317123 ext.8097

Website: <https://www.clchen.org.tw>

## Achievements

- The KCGMH Liver Transplant Center has performed over 2000 liver transplants as of July 2020. Of these cases, 88% were living donor liver transplantation. Its survival statistics in LDLT have been at the forefront when compared with the overall survival rates in the USA, Europe, and Japan.
- Professor Chao-Long Chen has published more than 500 SCI-cited scientific articles and has lectured in over 300 international and overseas congresses, honorary and visiting professorships.
- The program has trained more than 370 international fellows and observers to-date. The survival rate of liver transplantation is among the highest in the world. The 5-year survival rates are 98% for biliary atresia (Am J Transplant 2006), 91% for hepatitis B (Liver Transplant 2007), and 90% for liver cancer (Transplantation 2008). The center was bestowed with the 2005 Gold Award of National Biotechnology and Medical Care Quality for its excellence in quality of services, 2010 Silver Award of National Biotechnology and Medical Care Quality for Liver Transplant Imaging, 2014 Gold Award of National Biotechnology and Medical Care Quality for Liver Transplant Nursing, 2016 Silver award of National Biotechnology and Medical Care Quality for Liver Transplant Clinicopathology.
- For more information: <http://www.clchen.org.tw/>

# Taichung Veterans General Hospital

## Kidney Transplant Care

Kidney transplant care: Evaluation, post operation care, ABOi and highly sensitized kidney transplantation program. Shared decision making (SDM) is considered an important aspect of advanced CKD management, thus, the video of SDM of renal replacement therapy (RRT) and “Education Aid with Games” release to help their decision. The VGHTC Risky PatiEnt Dashboard (RED) was designed for full modality of patient safety care to detect potential high-risk patients to identify CKD patients. The hemodialysis intelligent system with wireless transmission patients’ data to our electron medical records can reduce HD nurse daily work, and “Smart Scheduling” and “Intelligent Security Monitoring” could visual process risky patients.

### Duration:

– Course: 1~3months / 3 persons

### Accommodation:

– Additional fee, NTD 1,200/day

### Program fee:

– Course: NTD 2,000/day

### Meals & other information:

– We provide one breakfast/person a day, reservation in advance.

## Program Details

### Study Objective

1. Physician: renal transplantation donor and recipient survey, peri-operative and post-operative care, long-term complications management
2. Quality management of renal care
3. Collaboration of computer since and renal care

### Related Skills / Surgical Technique

1. Renal biopsy
2. Renal transplantation
3. Intelligent technique integrated in renal care

## Applicant Qualification

- Physician, Nurses with Internal medicine clinical care experience
- The basic knowledge of renal transplantation
- Experience of general medicine or intensive care unit also accepted

## Contact Point

**Taichung Veterans General Hospital, International Medical Service Center**

Name: Cheng-Hsu Chen

E-mail: [imsc@vghtc.gov.tw](mailto:imsc@vghtc.gov.tw) ; [cschen@vghtc.gov.tw](mailto:cschen@vghtc.gov.tw)

Tel: +886-4-2359-2525 ext.2053 or 3040

## Achievements

- We started the first living renal transplantation (RTx) on 1983/5/3, the first cadaveric RTx on 1984/3/3, the first ABO incompatible living RTx on 2009/7/16 and the first peritoneal dialysis on 1984/2/17 in central Taiwan.
- We provide the comprehensive full range renal care with seven important achievements: 5,000 on-site patients with moderate to severe chronic kidney disease (CKD) still on Multidisciplinary Pre-ESRD Education Program (MEP) out of our exceed 10,182 cases since 2003 accredited as “Chronic Kidney Disease Health Promotion Center”, nearly 6,500 patients detected as early CKD (ECKD) with risk reduction in 2018, around 300 renal biopsy cases/year and the best survival rates continued to lead the country.
- We have trained more than 100 nephrologists, intensive care physician, renal transplantation surgeons and nurses in charge of nephrology wards and Intensive Care Units. Health Promotion Administration accredited the “Model Award of Kidney Disease Health Promotion Institutions in Medical Center in 2018”

# Taipei Veterans General Hospital

## Liver Transplantation Program

The Liver Transplantation Team, established on July 2001, is a multidisciplinary team. The team members include surgeons, hepatologists, radiologists, endoscopy physicians, pathologists, psychiatrists, intensivists and transplantation pharmacists.

### Duration:

- Course 1: < 1 month/ 2 person
- Course 2: 3 months~1 year/ 2 person

### Program fee:

- NTD 30,000 / month

### Accommodation:

- Shared room NTD 3,400 / month
- Single room NTD 500 / day

### Meals & other information:

- Employee restaurant NTD 55 / per meal

## Program Details

### Study Objective

1. Pre-transplantation patient and living donor selection & post- transplantation care;
2. Transplantation surgical techniques for both donors and recipients including live donors and deceased donors for trainees ;
3. Immune suppression agent usage & related complications.

### Related Skills / Surgical Technique

1. Live donor laparoscopic assisted hepatectomy and deceased donor organ recovery.
2. Liver transplant of recipient for both liver and deceased donors.
3. Pre-op evaluation and post-op care

## Applicant Qualification

- The applicant should have more than 3 years clinical experiences & more than 1 year working experience
- The applicant's profile will be assessed.

## Contact Point

### Division of Transplantation Surgery

Name: Dr. Cheng-Yen, Chen

Website: <https://wd.vghtpe.gov.tw/ts/Index.action>

## Achievements

- We had conducted more than 600 cases of liver transplantation since 2001 and 75% were live donor liver transplantation. Our surgical successful rate was 90% and 3-year survival rate reached to 75%. Although the survival rate is not very high, it is because we treated many difficult cases referred from other hospitals. We performed two cases of Domino liver transplant, one case of APOLT (auxiliary partial orthotopic liver transplant), and 4 cases of newborn liver transplantation which were never performed in other hospital in Taiwan. The live donor liver transplant for a 25-day old baby with 3.8 kg and a 4-month old baby with only 3.2 kg were successful treated in our hospital.
- Our researches include clinical innovative technique, stem cell transplantation for acute liver failure in swine, tolerance and many others associated with liver transplantation.
- We have trained more than 30 medical staffs (surgeons, intensivists and nurses) from foreign countries and from Taiwan.

# National Taiwan University Hospital

## Lung Transplantation

The Division of Thoracic Surgery primarily serves patients with diseases arising in the chest, including the lungs, mediastinum, and esophagus.

### Duration:

– Course: <2 year / person

### Accommodation:

– None

### Program fee:

– Course: NTD 10,000 / month.

## Achievements

- We had conducted 125 cases of lung transplantation and have a 50% transplant rate, which is comparable to the major center in Taiwan.
- Viet Duc Hospital assigned one team (11 people) to NTUH for lung transplant training from June 2018 to Dec 2018. After the training course, they successfully completed two cases of lung transplantation.
- Lung center in the Philippines assigned 4 people to NTUH for lung transplant training from 15 Nov 2015 to 31 Dec 2015.
- We published 10 papers and had 24 lectures about lung transplantation.
- We have trained 14 surgeons from all over the world.

## Program Details

### Study Objective

1. Recipient and donor selections for lung transplant
2. Post-transplant ICU care
3. Immunosuppression therapy for lung transplant

### Related Skills / Surgical Technique

1. Surgical technique training, including general thoracic surgery and lung transplant.
2. Video-Assisted Thoracoscopic Surgery
3. Bronchoscopic training

## Applicant Qualification

- Qualified licenses (medical degree or equivalent) with more than 1-year clinical working experience.

Information

# Orthopedics

Taiwan is the regional leader in orthopedics. Taiwan has developed several subspecialty in the field of orthopedics. These subspecialties are mainly classified by parts, such as spinal surgery, hand surgery, joint reconstruction, trauma orthopedics, sports medicine, bone oncology, pediatric orthopedics, and so on.

Taiwan's hospital is especially good at joint replacement and sports medicine. There are 20,000 cases of joint replacement an year on average. Almost every regional and teaching hospital performs the procedure up to US' standards.

Moreover, Taiwan widely uses MIS surgery, computer-aided navigation and rotation osteotomy to reduce the tissue trauma during operation and shorten the restoration time significantly. In general, patients can take care of themselves the day after the surgery and return to their normal life within two weeks.

# Far Eastern Memorial Hospital

## Minimally Invasive Spine Surgery

The Spine team of Department of Orthopedic Surgery at FEMH have performed over 3,600 minimally invasive spine surgeries (MISS) since 2005. There is a diverse range of MISS procedures: microendoscopic spine surgeries for disc herniation and degenerative spinal canal stenosis, percutaneous vertebroplasty/kyphoplasty, mini-open transforaminal lumbar interbody fusion, and oblique lumbar interbody fusion. In 2018, we have pioneered the most advanced full-endoscopic MISS procedure: unilateral biportal endoscopic (UBE) techniques. Spine surgeries were upgraded to an advanced level with the least tissue damages, minimal blood loss, excellent surgical fields, and fast recovery. The UBE techniques overcame the shortages of full-endoscopic MISS and led to effective, efficient, and safe treatment results. In 2019, we have successfully applied UBE technique in nearly all patients that required spine surgeries including spine fusion. The in-hospital stay for patients that received UBE fusion surgeries decreased by an average of 1.9 days as compared with mini-TLIF. This pioneer surgical technique has also received high recognitions in both national and international spine symposiums and conferences. Major hospitals in Taiwan have sent their surgeons to observe and to learn at FEMH. We designed programs to welcome and to share with all surgeons that are interested in advance MISS techniques.

### Duration:

- 6 months course
- 12 months course

### Program fee:

- NTD 30,000/month

### Accommodation:

- Additional fee, NTD 2,000/week

### Meals & other information:

- Not included meals.

## Program Details

### Study Objective

1. Concepts and theory of MISS
2. Pre-operative planning for MISS
3. Basic MISS techniques
4. Advanced MISS techniques
5. Clinical studies for MISS

### Related Skills / Surgical Technique

1. Unilateral biportal endoscopic (UBE) technique
2. Percutaneous vertebroplasty/kyphoplasty and related advanced application
3. Minimally invasive oblique lumbar interbody fusion

## Applicant Qualification

- M.D., Orthopedic or Neurosurgeon with specialist license
- Experience as a spine surgeon for at least 2 years.
- Willing to participate in the clinical research.

## Contact Point

### International Medical Center

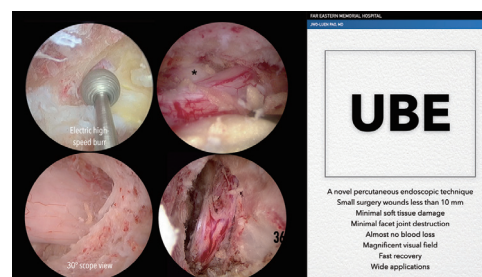

Name: Ms. Wan

E-mail: ips@mail.femh.org.tw

Tel: +886-2-77281679

## Achievements

- More than 3,600 cases of minimally invasive spine surgery (MISS) since 2005
- A leading teaching center for MISS in Taiwan
- A leading team for advanced unilateral biportal endoscopic (UBE) spine surgery in Taiwan. More than 600 cases of UBE surgeries since 2018
- A leading team for UBE fusion surgery in Asia and world since 2019
- Cooperate with industries for design and development of novel surgical instruments and surgical techniques

# Kaohsiung Municipal Ta-Tung Hospital

## Advanced Knee and Hip Arthroplasty Program

The Kaohsiung Municipal Ta-Tung Hospital (KMTTH) joint reconstruction team was led by Dr. Huang Hsuan-Ti and Professor Chen Chung-Hwan, highly specialized in knee and hip replacement surgeries.

The KMTTH and its joint reconstruction satellite facilities performed over 400 total knee and hip replacement per year, from primary knee and hip replacements to complex revision surgeries and orthopedic oncological reconstructions. The successful rate and satisfaction rates were well-above average.

The KMTTH orthopedic department had an orthopedic research center. With publication of innovative investigation in knee arthritis and osteoporosis treatment We have 3-5 trainees from the nearby countries each year.

### Duration:

- Course 1: <1month/ 2 persons
- Course 2: 3 months~1 year/ 2 persons

### Program fee:

- NTD 50,000/month
- For more learning content, additional fee NTD 30,000/week

### Meals & other information:

- Offering lunch

## Program Details

### Study Objective

1. The pre-operative plotting and planning of primary knee and hip reconstruction
2. The tension balance technique in total knee replacement
3. Bone defect assessment and reconstruction in revision knee and hip arthroplasty
4. Complex revision hip surgery with different surgical approaches

### Related Skills / Surgical Technique:

1. Uni-Knee with mobile or fixed bearing surface
2. Primary total knee replacement with different alignment balance
3. Treatment of post-traumatic hip osteoarthritis

## Applicant Qualification

- A qualified orthopedic surgeon with the clinical experience from 2~5 years.
- The trainee should be able to speak English or Mandarin.

## Contact Point

# Taichung Veterans General Hospital

## Common Orthopedic Surgery Program

The Department of Orthopedics at Taichung Veterans General Hospital (TCVGH) has provided medical care to a majority of population in the middle of Taiwan for decades. Our department comprises 20 well-experienced orthopedic surgeons specializing in spinal surgeries, joint reconstructions, and sports medicine.

### Duration:

– Course: 1~3 months / 4 person

### Program fee:

– NTD 2,000/day

### Accommodation:

– Additional fee, NTD 1,200/day

## Program Details

### Study Objective

1. Differential diagnosis, patient selection, and preoperative planning
2. Surgical technique
3. Postoperative care and rehabilitation program

### Related Skills / Surgical Technique:

1. Spinal Surgeries: ALIF, OLIF, Mazor robotic spinal surgery
2. Joint Reconstructions: TKA, UKA, THA
3. Sports Medicine: Arthroscopic suture bridge repair, rTSA

## Applicant Qualification

- Physician

## Contact Point

**International Patient Service Center, Department of Orthopedics, Taichung Veterans General Hospital**

Name: Ms. Lin

E-mail: [linsh@vghtc.gov.tw](mailto:linsh@vghtc.gov.tw)

Tel: +886-4-2359-2525 ext.5101

## Achievements

- In the Division of Spinal Surgeries, we conducted the most cases of anterior lumbar fusion techniques, including anterior lumbar interbody fusion (ALIF) and Oblique lumbar interbody fusion (OLIF), in Taiwan. Besides, Mazor robotic spinal surgery system was introduced in 2018, which assisted surgeons to improve the accuracy of screw implantation, patients' clinical outcomes and satisfaction.
- The Division of Joint Reconstructions mainly dealt with total knee arthroplasty (TKA), Oxford unicompartmental knee arthroplasty (UKA), and total hip arthroplasty (THA). According to the database from National Health Insurance in Taiwan, we had the sixth highest number of arthroplasties performed annually.
- In the Division of Sports Medicine, we had more than 2,000 case experience of rotator cuff tear in recent ten years. Varying surgical interventions, including arthroscopic suture bridge repair and reverse total shoulder arthroplasty (rTSA), were performed according to disease severity.
- National awards: 15th and 17th "National Innovation Award", and "Certificate of Disease-Specific Care for Joint Replacement"
- We have trained many surgeons from all over the world including Myanmar, Ukraine, Bengal, Hong Kong, and China.

# Taipei Tzuchi Hospital

## Advanced Foot and Ankle Surgery Program

The Foot and Ankle Team, led by Dr. Chen-Chie Wang, has vast experience in foot and ankle surgery, including different kinds of soft tissue repair, corrective osteotomies, fusion, to total ankle replacement. Minimal invasive surgery is another feature of our team, and Dr. Wang has developed several surgical techniques to accomplish such achievement.

**Duration:**

– 6 months/ 1 person

**Program fee:**

– NTD 80,000/month

**Accommodation:**

– Additional fee, NTD 3,000 / month

### Program Details

#### Study Objective

1. To learn the vast diversity of foot and ankle disorders
2. To understand different types of foot and ankle deformities
3. To learn soft tissue injuries of foot and ankle

#### Related Skills / Surgical Technique

1. Corrective osteotomies of foot and ankle deformities
2. Arthroscopic surgery of ankle
3. Minimal invasive soft tissue reconstruction of foot and ankle

### Applicant Qualification

- The applicant needs to have more than 2 years clinical experiences in orthopedic surgery

### Contact Point

#### Department of Medical Education

E-mail: med-edu@tzuchi.com.tw

#### Department of Orthopedic Surgery

Name: Dr. Chen-Chie Wang, Assoc. Professor, MD, PhD

Tel: +886-2-6628-9779 ext.3123

### Achievements

- The team performed over hundreds of cases per year, and the reputation has spread abroad for which many patients had been brought from other countries to our hospital for pursuing treatments.

### Academic Research

- Chung-Li Wang, Pei-Yu Chen, Kai-Chiang Yang, Hsing-Cheng Wu, Chen-Chie Wang. Ultrasound-Guided Minimally Invasive Surgical Resection of Retrocalcaneal Bursitis: A Preliminary Comparison with Traditional Open Surgery

# E-DA Hospital

## Trauma and Reconstruction

The orthopedic surgery department of E-Da Hospital is one of the most famous trauma team in the world. We are also the designated trauma training center in Taiwan by the AO foundation. Our superintendent, Professor Yuan-Kun Tu, is also the master of brachial plexus injuries and nerve regeneration.

### Duration:

- Course 1: < 3 months/ 2 person
- Course 2: 1 year/ 1 person

### Program fee:

- Upon discussion

### Accommodation:

- Additional fee, NTD 160/day

## Program Details

### Study Objective

1. Basic concept of fracture
2. Advanced surgical techniques for multiple trauma
3. Basic technique of microsurgery and soft tissue reconstruction

### Related Skills / Surgical Technique

1. Basic surgical technique of fractures
2. Basic microsurgery technique

## Applicant Qualification

- Residents or Attending of Orthopedic surgery

## Contact Point

Secretary, Miss Huang  
Email: ed110074@edah.org.tw  
Tel: +886-7-6150011  
Fax: +886-7-6150913

## Achievements

- We treat thousands of trauma cases every year and is one of the highest volume trauma center in Taiwan. We deal with not only bony fractures, but also soft tissue reconstruction and microsurgies.

## Academic Research

- We have a biomechanical lab specialized in biomechanics and implants evolution. More than 100 papers are published on SCI journals from the department and the lab every year.

## Experience in Training

- Dr. Ching-Ho Ma, faculty and instructor of AO foundation, is responsible for the trauma training courses. Hundreds of local and international fellows from all over the world had been trained in our institute in the past decades, and more of them are coming for their fellowship in the near future.

2011 Annual Meeting of Taiwan Society for Surgery of the Hand (TSSH) and Cross-strait Summit Forum on Reconstruction of Hand Function

# Cathay General Hospital

## Orthopedic Training Program

Cathay General Hospital had performed over 250 cases of joint replacement each year. The infection rate is lower than 0.5% and 10-year survival rate is higher than 93%. The orthopedic team had joined medical team and international surgery demonstration for years. We had done 65 successful cases in Paraguay and Panama. We have an eye for Minimally invasive joint replacement and fracture reduction of osteoporosis' patient technique.

**Duration:**

– Course: 1~3 months / 1 person

**Program fee:**

– Course: NTD 20,000/month

**Accommodation:**

– Included in program fee already

**Further information:**

– Offering lunch, dinner and lunch box

## Program Details

### Study Objective

Minimally invasive joint replacement and fracture reduction technique

1. Physician training / Fellowship
2. Patient transfer collaboration
3. Workshop / Lecture

## Applicant Qualification

- Orthopedic Surgery license is required

## Contact Point

### Medical Development

## Achievements

- We have receiving recognition by Ministry of Foreign Affairs as well international training institution.
- We have trained many physicians from all over the world. We will base on your local medical requirement to design your training program.

# Dalin Tzu Chi Hospital

## Knee Health Promotion Option

KHPO treatment results		
Severity	Clinical Symptoms	satisfaction rate
II	slightly deformed	91.2%
III	bone spurs, moderately deformed	93.6%
IV	severely deformed, need knee replacement	91.2%

Based on our research in the medial abrasion syndrome and our experience in performing the ACRFP (arthroscopic cartilage regeneration facilitating procedure), we inaugurated the comprehensive Knee Health Promotion Option, KHPO, in 2007. Physicians in orthopaedics, family medicine, rheumatology, rehabilitation and their nurses are welcome to join us to provide care to sufferers of knee OA.

### Duration:

– Course: 1 week/ 2 person

### Program fee:

– Course: NTD 200,000/week

### Accommodation:

– Other: Need to apply for separately at your own expense.

## Program Details

### Study Objective

1. Learn about “medial abrasion syndrome”, the real etiological mechanism for osteoarthritis of the knee. Study pathological changes and clinical characterization.
2. Learn about the “Knee Health Promotion Option”, a comprehensive treatment protocol.
3. Learn key surgeries.

### Related Skills / Surgical Technique

1. Arthroscopic Cartilage Regeneration Facilitating Procedure, ACRFP
2. Microplasty of The Knee
3. Precision Total Knee Replacement

## Applicant Qualification

- An orthopaedic attending physician for at least two years
- having performed at least 100 arthroscopic operations.

## Contact Point

### International Knee Health Promotion Center

Tel: +886-5-2648000 ext.5234

Website: <http://khpo.iiiedu.org.tw/zh/about/>

## Achievements

- At our center, we treat about 800 patients a year under the KHPO program. Our research lab has continued to work. We expect to further raise the success rate of the KHPO.
- This table contains the results of 520 KHPO patients in 2011 after 3-year follow-ups.
- Repeated impingement between mediopatellar plica (medial plica) and the opposite medial femoral condyle during knee motion causes a medial abrasion phenomenon, which is an important cause for the cartilage in the knee to be gradually worn off (commonly but erroneously referred to as “degenerated”). Twelve papers about this have been published in international journals.
- We have trained 8 surgeons from all over the world.

## Advanced Reconstructive Microsurgery

The microsurgery surgical achievements in the department are unrivaled in the world and create a new breakthrough in the difficult microsurgical reconstruction, such as voice reconstruction with autologous intestine, appendix reconstruction of the cervix and vagina with the large intestine, reconstruction of the vagina with the transverse colon, reconstruction of many organs (esophagus, ureter and urethra), limb reconstruction, reconstruction of the head and neck and reconstruction of lymphatic system.

**Duration:**

- >1 year / 4 fellows

**Program fee:**

- Upon discussion

**Accommodation:**

- Lodging and meals not included

### Program Details

#### Study Objective

1. Free skin flaps for reconstruction surgery
2. Intestinal flap for venous reconstruction
3. Lymphedema surgery and supermicrosurgery
4. Regional and conventional flaps which are used for solution of possible complications or patients not auditable for free flaps
5. Advanced microsurgery for complex deformities

### Applicant Qualification

- More than 3 years of clinical experience in plastic surgery.
- Valid Physician/Medical License

### Contact Point

#### International Center

Name: Ms. Luna Lin

Website: <https://edu.lib.cmuh.org.tw/media/1818>

### Achievements

- Prof. Hung-chi Chen as the Director of the International Service Center also has his special ideas on treatment of lymphedema. Depending on the patient's severity, various surgical modalities, including modified Charles' surgery, extensive subcutaneous tissue excision with preservation of perforators, and lymphatic tissue transplantation, are very effective in alleviating lymphedema in the patient's upper or lower extremities.
- Prof. Hung-chi Chen has trained around 200 foreign doctors from the United States, UK, Italy, Belgium, Brazil, Japan, Hong Kong, Singapore and South Korea, etc.

# E-DA Hospital

## Microsurgery and Reconstruction

The Department of Plastic and reconstruction surgery established in 2004 is an internationally known high-volume center for microsurgery. Here, our specialists provided high quality care in a multi-disciplinary setting, mainly for patients with head and neck cancers, but also other reconstructive needs.

### Duration:

- Course 1: < 3 months/ 2 person
- Course 2: 1 year/ 2 person

### Program fee:

- Upon discussion

### Accommodation:

- Additional fee, NTD 160/day

## Program Details

### Study Objective

1. Comprehensive and advanced modern plastic surgical training
2. Microsurgery workshop and microsurgery training in animal models
3. Facial trauma management
4. Craniofacial deformity treatment
5. Surgical mission trips overseas

### Related Skills / Surgical Technique

1. Free-style perforator flap
2. Free- style recycled flap

## Applicant Qualification

- Residents or Attending of Plastic surgery

## Contact Point

### Department of Medical Education

## Achievements

- We have completed more than 3000 free flaps transfer for reconstruction of difficult wounds, and our Head and Neck Microsurgical Reconstruction team has been awarded the Symbol of National Quality.
- We regularly make academic contributions to multiple internationally recognized journals in the field of plastic surgery, including an article awarded the Best Reconstructive Paper Award in 2015 in the journal *Plastics and Reconstructive Surgery*.
- Our department also offers microsurgical fellowship programs to train the future generation of reconstructive specialists and since 2007 more than 50 fellows from all over the world have completed our program.

# Kaohsiung Veterans General Hospital

## Microsurgery Free Flap & Breast Reconstruction Training Program

We have the most experienced surgeons in the field of free thoracodorsal artery perforator (TDAP), peroneal and fibular flap; Breast reconstruction with Transverse Rectus Abdominis Myocutaneous flap (TRAM).

**Duration:**  
– 1 month

**Program fee:**  
– Free

**Accommodation:**  
– Application for dorm (limited)

### Program Details

#### Study Objective

1. Free TDAP, peroneal, and fibular flap training program
2. Pedicled TRAM flap training program

### Applicant Qualification

- Basic qualifications:
  - More than 1 year working experience
  - Visiting Staff
- Others specifications:
  - Doctor license and English ability

## Integrated Burn and Wound Care Training Program

Our team, includes clinical staffs with experience on treatments of the diabetic foot and difficult wounds, is committed to providing integrated wound care with one-stop services.

### Duration:

– 1 week/ 3 person

### Accommodation:

– can assist to arrange.

### Program fee:

– Attending Physician: NTD 10,000/day  
– Fellow: NTD 7,000/day  
– Resident/Nurse/Others: NTD 5,000/day

### Meals & other information:

– Administrative fee NTD 3,000/person

## Program Details

### Study Objective

1. Wound assessment and clinical guidelines
2. Clinical skills for wound care (dressing)

### Related Skills / Surgical Technique

1. Wound care
2. Negative-pressure wound therapy (NPWT)

## Applicant Qualification

- More than 1 year of clinical working experience.
- Majored in medicine or nursing.

## Contact Point

# Tung's Taichung Metro Harbor Hospital

## Specialist Physician and Nurse Training Program

Established in 1971, for the past 50 years, Tung's Hospital has grown to 1,500 numbers of bed teaching hospitals with over 2,800 staff. Completed the 5th JCI accreditation, Tung's Hospital has reached international care standards.

**Duration:**

– 1-2 weeks

**Accommodation:**

– Dorm Room (Twin) is available, but depending on the situation.

**Program fee:**

– According to learning content

**Meals & other information:**

– Participants must be proficient in English or Chinese; there will not be translational services for this course.

### Program Details

#### Study Objective

1. A better understanding of the health insurance and care system in Taiwan.
2. Patient safety and its clinical application
3. Outpatient care, surgical and nursing care, rehabilitation.

#### Related Skills / Surgical Technique

1. Medical service following the JCI standards.
2. Observation of team-based care.

### Applicant Qualification

- Please provide the certificate of the qualified medical practitioner in the country of origin.
- Before arriving in Taiwan, please provide health examination and vaccination records (Syphilis, Tuberculosis, Measles, German Measles, and COVID-19).

### Contact Point

# Kaohsiung Municipal Ta-Tung Hospital

## Single Port Laparoscopic Inguinal Hernia Repair Training Course

The Department of Urology is composed by 6 visiting physicians led by director Ke, Associate Professor of Kaohsiung Medical University. Our urologists are experienced in laparoscopic procedures and can perform single port surgery proficiently.

### Duration:

- Course 1: 1 month/ 2 persons
- Course 2: 3~6 months/ 2 persons

### Program fee:

- NTD 80,000/month

### Accommodation:

- None

### Meals & other information:

- None

## Program Details

### Study Objective

1. Distinguish between direct and indirect types of inguinal hernia
2. Understand the surrounding anatomy ("triangles") to prevent complications
3. Tips and tricks of single port laparoscopic surgery

### Related Skills / Surgical Technique

1. Safely create extraperitoneal working space
2. Identification and delicate isolation of hernia sac
3. Placement details of different mesh to repair anatomical defects

## Applicant Qualification

- The Trainee should be a qualified urologist who understands the basics of laparoscopy.
- The trainee has to speak English, Mandarin or Taiwanese.

## Contact Point

### International Medical Service Center

Name: Ms. Yang

E-mail: intl.center@kmtth.org.tw

Tel: +886-7-2911101x8995

Line: @792enjof

## Achievements:

- At least 2 cases of Laparo-Endoscopic Single Site (LESS) repair of inguinal hernia are performed in our hospital every month, with a success rate of 100%. No Major complications (Clavien-Dindo  $\geq$  III) occurred in the past 6 years.
- The results of LESS repair of inguinal hernia in our hospital were published in Minim Invasive Ther Allied Technol (2020 Oct;29:293-298).
- Every year, our hospital has licensed urologists to apply for LESS surgery.

# Taipei Tzu Chi Hospital

## Pediatric Urology Training Program

Pediatric urology has been a pivotal field of interest in our hospital for several years. Professor Stephen Shei Dei Yang, the Deputy Superintendent of Taipei Tzu Chi Hospital, makes an endeavor to further the quality urological care of children and currently serves as the 7th president of APAPU (Asia-Pacific Association of Pediatric Urologists). Peculiarly we put an emphasis on minimally invasive surgeries that limit the size of incisions, diminish associated pain and shorten convalescence.

**Duration:**

– 3 months, 2 trainees in one year

**Program fee:**

– NTD 80,000/month

**Accommodation:**

– Additional fee, NTD 3,000 / month

### Program Details

**Study Objective**

1. To learn the nomogram of pediatric voiding
2. Best knowledge to share on pediatric urology
3. Improve skills and expertise on pediatric surgeries

**Related Skills / Surgical Technique**

1. Interpretation of pediatric voiding patterns
2. Surgical tips for hypospadias repair
3. Minimal invasive surgeries on pediatric urology

### Applicant Qualification

- urological specialist or fellowship

### Contact Point

**Department of Medical Education**

E-mail: med-edu@tzuchi.com.tw

Secretary: Ms. Hsuan-Hsuan Wang

E-mail: wang92492@tzuchi.com.tw

Tel: +886-2-6628-9779 ext. 3128

### Achievements

- We have yielded good successful outcomes on hundreds of pediatric surgeries, including hypospadias repair and mini-laparoscopic herniorrhaphy.

### Academic Research

- There were plenty of papers published focusing on pediatric hernia, hypospadias, voiding dysfunction, UPJ obstruction, and innovative Tzu Chi nomogram as well.

### Training Experience

- We have trained several fellows from overseas, including Philippines and Malaysia.

# En Chu Kong Hospital

## Urolithiasis Program

We conduct more than 200 flexible ureteroscopic lithotripsy and 20 PCNL in each year. There are 6 visiting staffs who all are very skillful for endourology.

**Duration:**  
– 1 months/ 1 person

**Program fee:**  
– NTD 20,000/month

**Accommodation:**  
– Additional fee, NTD 1,000 /month

### Achievements

- Our stone free rate is high (up to 90%) and our complication rate is low.
- During past 5 years, we have published several papers in endourology and neurourology.
- We have trained four urologists from Vietnam and Australia.

### Program Details

#### Study Objective

1. Pre-operative evaluation and post-operative care.
2. Endourology surgical technique.
3. Metabolic evaluation in urolithiasis patients.

#### Related Skills / Surgical Technique

1. Flexible ureteroscopic lithotripsy.
2. Percutaneous nephrolithotripsy (PCNL).
3. Combined antegrade and retrograde flexible ureteroscopy.

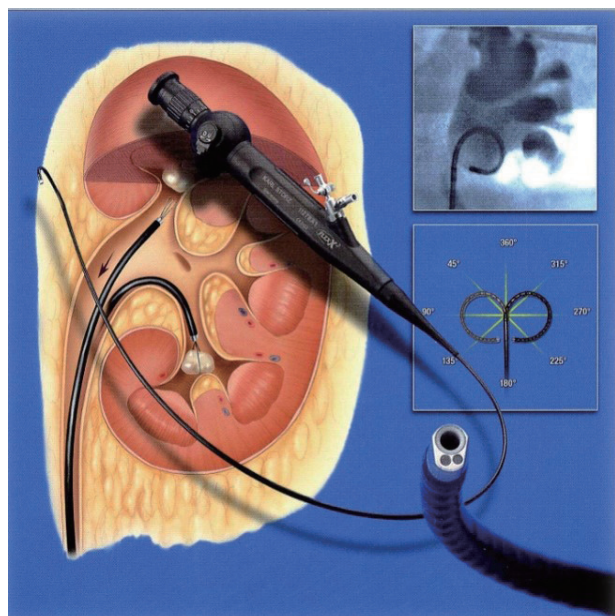

### Applicant Qualification

- Participants should have finished resident doctor training and are interested in endourology field.

## Retrograde Intrarenal Surgery(RIRS)

Retrograde intrarenal surgery(RIRS) has an increasingly common procedure in the treatment of large and complex renal stones. However, this technique requires specific training. The aim of our workshop is to present essential practical information about all aspects of the technique. During the training, we organized lecture and live demo surgery.

### Duration:

- Course 1(1-day): short lecture and live surgery, 4-5 persons
- Course 2(2~4 weeks) 2-3 persons
- Course 3(irregularly scheduled): complete lecture and live surgery, group

### Program fee:

- Course 1 NTD 30,000/day
- Course 2 NTD 50,000/week

### Meals & other information:

- Lunch included

## Achievements

- Has performed more than 500 cases of THVI, We have abundant experience in doing this surgery (30 case per month) with well-organized team and integrated equipments.
- Our team presented our experience in many international conference, including JUA, WCE, TUA, EULIS and SIU. Besides, our research outcome got published in many high-ranking international journals.
- Many visitors from all over the world ever came to our hospital in the last decade.

## Program Details

### Study Objective

1. key note lectures
2. Live-surgery presentations
3. practice in hand-on training sessions

### Related Skills / Surgical Technique

1. Dry lab and wet lab
2. Live-surgery: step-by-step teaching

## Applicant Qualification

- Senior urology resident doctor or attendant doctor

## Contact Point

# Yonghe Cardinal Tien Hospital

## Pediatric Neurology and Neurobehavior Training Program

Since 2007, our hospital has established a pediatric neurology department to start treating children with neurodevelopmental diseases. At present, the team of the hospital provides a complete assessment and treatment process for these children. The children with neurobehavioral diseases in this hospital have good control. About 300 children with neurodevelopmental problem were diagnosed and treated in one year.

### Duration:

– Course: 1 month / 2 person

### Program fee:

– NTD 10,000/month

### Accommodation:

– None

## Achievements

- The Pediatric Neurobehavior Program is a subspecialty service focuses upon evaluation and management of behavioral effects associated with neurologic illness in children. Diseases emphasized include epilepsy, movement disorders, intellectual problems or developmental disabilities, migraines, and other complex medical conditions. A comprehensive neuropsychiatric assessment is done in collaboration with neurology and neuropsychology services. Our program offers an interdisciplinary approach to pediatric neurologic illness that includes a psychiatric/psychological perspective. Our research team also has publishes in pediatric neurobehavior fields.

## Program Details

### Study Objective

1. Our training programs include patient approach in the clinic
2. neurophysiological examination in children
3. psychological assessment in children
4. rehabilitation for children with developmental problems.

## Applicant Qualification

- Medical board of pediatrics
- has more than 1 years clinical experiences & working experience

## Contact Point

## Pediatric Rehabilitation Program

The Pediatric Rehabilitation Center in Tao-Yuan General Hospital consist of doctors, therapists, social workers, client manager, and the prosthetics, orthotics, and assistive device center. Our team provides the most comprehensive service for children with developmental delay, and we cared more than 30,000 D.D. children per year. Our family-centered early intervention model focus on the needs of both clients and their families.

### Duration:

– The program duration is mainly based on demands, can be within 1 to 2 months.

### Program fee:

– NTD 100,000 / person

### Accommodation:

– NTD 1,500 / month

### Meals & other information:

– English taught

## Achievements

- Our team received symbol of national quality in 2018, and medical specialists from more than 20 countries had come to visit or receive training.

## Program Details

### Study Objective

1. Family-centered early intervention model in TYGH.
2. Pediatric developmentalevaluation of joint assessment center
3. Diagnostic assessment tool practice.
4. Pediatric rehabilitation intervention practice.
5. Prosthetics, orthotics, andassistive device center.

## Applicant Qualification

- For participants who are medical specialists with license.

## Pediatric Hematopoietic Stem Cell Transplantation

The department of pediatric hematology and oncology has set up an excellent team consisting of physician, nurse practitioners, case managers, and social worker to provide comprehensive care for children with cancer or blood disorders. We are expertise in pediatric hematopoietic stem cell transplantation (HSCT). In addition to professional members for HSCT, our hospital has special HSCT rooms, positive pressure rooms, and exclusive units for pediatric HSCT. Peripheral blood stem cells are harvested, counted, frozen, and thawed by the specialist. Most complications of HSCT can be solved smoothly by our team. Haploidentical HSCT with post-transplant cyclophosphamide has been well established for many years. Donor lymphocyte infusion will be preemptively used for positive MRD in leukemia after HSCT.

### Duration:

– Upon the needs of the trainee

### Program fee:

– Upon discussion

### Accommodation:

– Accommodation fee NTD 7,500/ month

– Internet fee is charged separately, about NTD 333/ month

## Program Details

### Study Objective

1. Familiar with the principles and indications of pediatric hematopoietic stem cell transplantation (HSCT).
2. Familiar with selection of the donor for HSCT.
3. Familiar with performance and care for HSCT

### Related Skills / Surgical Technique

1. Search suitable hematopoietic stem cells (cord blood, MRD, MUD, or haploidentical donor)
2. Harvest, counting, freezing, and thaw of hematopoietic stem cells
3. Select suitable conditioning regimens for HSCT (MAC or RIC)
4. Management of complications of HSCT (infection, VOD, or GVHD)
5. Long-term follow up after HSCT

## Applicant Qualification

- Board of pediatrics
- Has more than 1 year clinical experiences for pediatric hematology and oncology

## Contact Point

### Department of pediatric hematology and oncology

Name: Dr. Kang-Hsi Wu

E-mail: cshy19.3@gmail.com

Tel: +886-4-2473-9595 ext 21757

## Achievements

- We have finished more than 150 pediatric HSCT, including cord blood transplantation and haploidentical HSCT.
- We are most experienced in pediatric haploidentical HSCT with post-transplant cyclophosphamide in Taiwan.
- The transplant-related mortality is less than 5% in our team.
- We have published more than 100 SCI papers and more than 20 SCI papers are associated HSCT (such as cord blood, GVHD, infection...et al).
- Children from Sudan and China successfully received HSCT by our team.
- Doctors from Vietnam, Armenia, and South Korea have been trained by our team
- The chief of our team has given many international lectures and hosted many international conferences.
- The chief of our team is the reviewer of many SCI journals.

# Taipei Hospital, Ministry of Health and Welfare

## Smart Allergy & Immunology Care Program

The allergy & immunology team is a multidisciplinary team, which have been engaged in the childhood rheumatic, allergic and immunologic disorders. We accomplished skin prick test, allergen tests, exhaled nitric oxide tests, peak flow, gut microbiota testing, immune suppression agents, biologicals, sublingual desensitization, and nasal spray, and wet wrap therapy for atopic dermatitis.

We have conduct cohort studies, case control studies, and clinical trials. We are the first and only allergy & immunology team, who perform noninvasive allergen skin prick tests for young children without invasive blood sampling in Taipei. Moreover, we search for asthma exacerbation early warning sign by smartphone applications and wearing device. Our team also develop a hierarchical health decision support system for predicting asthma exacerbations.

### Duration:

– 1 month/ 1~2 person

### Accommodation:

- Less than 7 Days : USD72 (NTD2,000) per person
- Less than 15 Days : USD108 (NTD3,000) per person
- More than 15 Days ~ 1 month : USD180 (NTD5,000) per person

### Program fee:

– NTD 10,000/ month

## Program Details

### Study Objective

1. New progress in the management treatment of asthma, allergic rhinitis and atopic dermatitis
2. The mechanism and practice of exhaled nitric oxide
3. Immune suppression agent usage & related complications (e.g. Dust mite sublingual desensitization and Intranasal steroid nasal spray).
4. How to use asthma self care apps and health management cloud platform to achieve better asthma control
5. How to use share decision making on asthma management

### Related Skills / Surgical Technique

1. Skin prick test, Sublingual immunotherapy, biologicals
2. FeNO, peak flow, lung function test, food challenge test
3. Nasal irrigation for allergic rhinitis, wet wrap therapy for atopic dermatitis
4. Soft tissue sonography for arthritis
5. IOT platform, wearing device setting
6. COVID19 test
7. Trainees can attend Steering Committee meeting and a JAAFA program for APAAACI, an international platform that will lead to the development of leadership in allergy and immunology

## Applicant Qualification

- has more than 1 years clinical experiences
- applicant's profile will be assessed

## Contact Point

## Achievements

- Each pediatric allergist has conducted about 315 cases of asthma management and 81% of asthma cases reach remission and medical cost decrease. We have studied the impacts of early life environment exposures on the development of allergic diseases in children. We have more than 200 SCI publications and conference abstracts.
- We have trained more than 30 pediatricians, allergists, and medical students, from all over the world.
- Dr. I-Jen Wang, the PI of the allergy laboratory, have taught students from Touro University College of Osteopathic Medicine, California, USA. One of the students, Dr. Karen Koto, won the 2nd place abstract in the Research Category of the BIOMEA/SOMA Poster Competition in the 13th Annual AOA Bureau on International Osteopathic Medical Education and Affairs.

### Publications

- Our research team contribute to the understanding of the etiology of environment -related allergic diseases and may initiate new strategies for early prevention or therapeutic intervention in children with allergic diseases.

### Teaching Clinic

Mortality  
conference

Teaching  
Round

### Achievements

**Clinical performance:**

- Our Pediatric Cardiology Department has set a number of records in the past decade. For example, 75% of children underwent open-heart surgery do not need to have cardiac catheterization first. They only need to undergo echocardiogram before surgery and the ratio is the highest in the country. It reduces social costs and the physical and mental burden of patients. In addition, cardiac catheterization for congenital heart disease also has excellent achievement, so that the patients can be treated by cardiac catheterization without surgery. Other studies such as the prevalence of anti-penicillin pneumococci are also important in the southern region. We also offer 36 kinds of allergen specific test and quantitative analyzer for the diagnosis of allergic children.
- In addition, prematurity of 590grams survives under our neonatology department's care. We also involve in the clinical care of critically ill infants in the regional medical network, and maintain a good interaction with regional hospitals and obstetrics and gynecology hospitals, offer high quality medical services. The mortality and morbidity rate of premature infants can be maintained at a low level. The ratio of severe intraventricular hemorrhage of the premature infants in our hospital in 2017 is much lower than the average data in Taiwan, and we are commended and rewarded by the Taiwan Neonatal Medicine Association. On average, we cared for more than 300 newborns who need intensive care per year. We also can provide neonatal therapeutic cardiac catheterization. Currently, we treated a premature infants who weighted 1500 grams with patent ductus arteriosus successfully.

**Characteristic:**

- Pediatric echocardiogram, cardiac catheterization examination and intervention, and cooperate with Division of Cardiovascular Surgery for treatment of children with congenital heart disease.
- Each specialist has sufficient resource and manpower to provide an excellent faculty and learning environment.

# Chang Bing Show Chwan Memorial Hospital

## Intensive Course in Laparoscopic General Surgery

Show Chwan Health Care System is one of the largest private health care system with hospitals located throughout Taiwan. In 2008, IRCAD/AITS-Asian Institute TeleSurgery was established through the collaboration between Show Chwan and Health Care System in Taiwan and IRCAD/EITS in France. With the efforts from every employees at Show Chwan Health Care System, AITS not only improved medical quality in Taiwan but also enhanced Taiwan's visibility in the international health care community. So far, hundreds of courses have been taught in IRCAD Taiwan include General Surgery, Shoulder Joint, Knee Joint, Liver, Colon & Rectal, Upper GI, Obstetrics, etc. In order to advance minimally invasive surgery in the future, we will be planning courses in different medical fields such as Neurosurgery, Otolaryngology, Plastic Surgery, Vascular embolization, Heart Stent etc.

### Duration:

– 3-5 days, up to 40 people (March 16-20, June 13-16, Oct.12-10.16)

### Program fee:

– NTD 40,000-90,000/each course

### Accommodation:

– NTD 3,500/ day

### Meals & other information:

– Offering lunch

## Program Details

### Study Objective

1. To provide the basic knowledge required for clinical applications
2. To describe all the basic principles (instruments, materials, equipments) and present the most used basic laparoscopic techniques
3. Hands-on training sessions to learn or improve performance of basic technical tasks in laparoscopic surgery such as intra-corporeal suturing and knots tying techniques, two-hands co-ordination for dissection, safe use of energy in laparoscopy
4. To describe results and potential complications of laparoscopic procedures

### Related Skills / Surgical Technique

1. Interactive theoretical and video sessions between faculty and course participants
2. Live and pre-recorded operative demonstrations

## Applicant Qualification

- Doctors in the Department of Medicine
- More than two years (inclusive) in surgery or related fields
- Physicians interested in laparoscopic surgery or veterinarian.

## Contact Point

Tel: +886-4-781-2988

Name: Candiece/Sara/Dorothy

E-mail: register@ircadtaiwan.com.tw

Website: www.ircadtaiwan.com

## Achievements

- The satisfaction score of the course is the highest with a score of 5, and the average satisfaction from 2016 to 2019 is 4.8. In addition to the satisfaction survey of the trainees, the trainees will give us considerable praise and affirmation with the Comment in the trainee evaluation form.

## Academic Research

- IRCAD will first apply related research and development to the training of minimally invasive surgery and publish the relevant results in the global trend of minimally invasive surgery, introduce the concept of an international medical training and research and development center, actively engage in academic research, and improve the academic research by publishing papers. The R & D department of this center is fully responsible for clinical medical imaging research.
- IRCAD has also established an R&D Department dedicated to development of such minimally invasive surgical techniques as 3D remodeling, 2D-to-3D endoscopy, augmented reality surgery, and robotic surgery, thus bringing innovative technology to clinical practice.

# Chung Shan Medical University Hospital

## Minimally Invasive Surgery of GS

We're working hard on the development of minimally invasive surgery such as da Vinci surgery and laparoscopic surgery in the digestive tract (hepatobiliary and pancreatic stomach), thyroid disease, breast surgery and hernia surgery also actively establish the application of reduced port technique in minimally invasive surgery. We obtained INTUITIVE "da Vinci Surgery(GS) Observation Site" and HIWIN "MIT Robotic Surgery Observation Site" certification in 2020. In 2021, "Single incision minimally invasive surgery" has been awarded The Symbol of National Quality.

### Duration:

– At least 2 weeks

### Program fee:

– Depend on the days of staying.

### Accommodation:

– The dormitory is a room, rents are calculated according to the size of the room and the staying of nights, an average of about NT\$ 7,500 a month and it's about five minutes by bus from the hospital. Internet fee is charged separately, about NT\$ 333 a month, calculated based on your staying of nights, and ethernet only.

## Program Details

### Study Objective

1. Familiar with the principles and techniques of minimally invasive surgery(include Robotic, Laparoscopic and Single incision).
2. Familiar with surgical techniques through clinical surgical observations and exercises.
3. Correcting industry to understand the development trend and innovation of minimally invasive surgery.

### Related Skills / Surgical Technique

1. Surgical technique include da Vinci Robotic, Robotic Endoscope Holder, Laparoscopic Surgery, and Single incision Surgery (Laparoscopic and Robotic).
2. The above surgical items include Hepatobiliary Surgery, Pancreatic Surgery, Whipple, Gastrointestinal Surgery, Bariatric Surgery, Thyroid surgery, Breast disease, Hernia.

## Applicant Qualification

- Board certificate surgeon
- has more than 1 year clinical experiences

## Contact Point

### Da Vinci Minimally Invasive Surgery Center and Department of General Surgery

Name: Mr. Chen

E-mail: cshe845@csh.org.tw

Tel: +886-4-2473-9595 ext.34936

Line: @csmuhdvc

## Achievements

- We have the largest volume of da Vinci Surgery in General Surgery field since 2016 in Taiwan.
- 949 da Vinci and 1,425 laparoscopic procedures have been performed from July,2015 to July,2021, including 426 single-incision da Vinci and 449 single-incision laparoscopic procedures. The ratio of total single-incision surgery was 36.8% (875/2,374); In da Vinci surgery, the ratio of conversion from single-incision to multiple-incision is less than 5%.
- We participate in the annual meeting of the Taiwan Surgery Association and have published 3 SCI papers and obtained 3 patents.
- Total of 405 surgeons who underwent surgical training or observation in our hospital from May, 2016 to May, 2021 including surgeons from Italy, Germany, Hungary, Greece, India, the Philippines, Thailand, Japan, South Korea, China, etc.

# National Taiwan University Hospital

## ECMO Training Program

NTUH ECMO program was started from 1994. We provide a comprehensive and integrated ECMO training program, covering neonatal to adult, and heart to lung.

**Duration:**

– Course: <2 year / person

**Program fee:**

– Course: NTD 10,000 / month.

**Accommodation:**

– None

## Achievements

- Up to 2021, the NTUH-ECMO team has operated more than 3300 ECMO patients, with 180-220 patients annually in the past 5 years, and a 40% overall survival rate.
- Our program also features ECMO-assisted CPR (ECPR), one of the best practices in the world.
- More than 180 papers on ECMO-related issues were published in high-quality SCI journals from our team in the past 20 years, including Lancet, Circulation, JACC, Intensive Care Medicine, Critical Care Medicine, and so on.
- We have trained 195 foreign medical staffs by workshop and fellowship, including physicians, surgeons, nurses, and perfusionists.

## Program Details

### Study Objective

1. ECMO equipment (VA and VV)
2. ECMO patient care (VA and VV)
3. ECPR

### Related Skills / Surgical Technique

1. Cannulation (Physician/Surgeon)
2. Circuit priming
3. Daily checking of ECMO patients

## Applicant Qualification

- Qualified licenses (medical degree or equivalent) with more than 1-year clinical working experience.

# Taichung Tzu Chi Hospital

## Minimally Invasive Surgical Technique of Cochlear Implantation

The department of Otorhinolaryngology of Taichung Tzu Chi Hospital includes experienced surgeons, audiologists, and speech-language therapists. We established a personalized standard protocol in evaluation, genetic counseling, diagnosis, surgery, and pre-and-post-implant rehabilitation services. Meanwhile, drive-forward the precision medicine that defined as targeting the right treatments, to the right patients, at the right time.

The two surgeons, the Chairman Hung-Pin Wu and Professor Chuan-Jen Hsu have been on the academes committees of virtually all-major national and international meetings about cochlear implants. They also have been demonstrated cochlear implant surgeries over the world, e.g. Indonesia, Mongolia, China, Malaysia.

### Duration:

– The program duration can be 3-12 months, 2 person/year.

### Program fee:

– Free

### Accommodation:

– Accommodation is upon hospital policy.

### Meals & other information:

– English taught

## Program Details

### Study Objective

1. Learn pre-operative evaluation
2. Learn minimally invasive surgical technique of cochlear implantation: small wound and soft technique cochlear insertion
3. Learn postoperative patient care: cochlear implant activation and mapping

## Applicant Qualification

- For participant who has clinical experiences in Otorhinolaryngology field for more than 3 years.

## Contact Point

### Department of Otorhinolaryngology H&N

Name: Ms. Ting Chiu

Tel: +886-4-36060666 ext. 4317

Website: <https://taichungsub.tzuchi.com.tw/34>

## Achievements

- We had conducted over 200 cases of cochlear implantation and achieved 100% successful rate of operation.
- Minimally invasive surgical technique including small wound, which is less than 2.5 cm, and soft technique cochlear insertion is our routine. Minimally invasive surgical technique promises postoperative hearing preservation and the integrity of the cochlear microenvironment.
- Our team also emphasize on postoperative rehabilitation including cochlear mapping, hearing and speech therapy to make most benefit of the cochlear implantation.
- Our team have published around 4-8 researches of Otorhinolaryngology and Cochlear Implant per year in international journals.

# National Cheng Kung University Hospital

## Medical Personnel Exchange Program

National Cheng Kung University Hospital (NCKUH) is a national hospital and was established in 1980 and formally opened to the public on June 12, 1988. We provide medical, educational and research services showing excellent achievement. NCKUH is accredited to be the model of excellent operation in Taiwan that other medical centers can learn from.

### Duration:

- Course 1: < 1 month/ 2 person
- Course 2: 3-6 months/ 1 person

### Program fee:

- Doctor (< 3 months): NTD 6,000-10,000/month
- Nurse (< 3 months): NTD 10,000-12,000/month
- Others (< 3 months): NTD 5,000/month
- Doctor (> 3 months): NTD 6,000-8,000/month
- Nurse (> 3 months): NTD 12,000/month
- Others(> 3 months): NTD 4,000/month

### Accommodation:

- Additional fee, NTD 1,280 / day

### Meals & other information:

- Duration depending on the reception of each department
- Not including meal

## Program Details

### Study Objective

1. Holistic Care
2. Skills of teaching and assessment
3. Enhance inter-professional education and practice

### Related Skills / Surgical Technique

1. Clinical Technique (depends on the preceptees' specialties)

## Applicant Qualification

- Have license of medical personnel.
- Has more than 1 year clinical experiences & more than 1 year working experience.
- Fluent English

## Contact Point

Website: <https://www.hosp.ncku.edu.tw>

## Achievements

- Number of surgical procedures is 32,908. Total number of patients undergoing organ or tissue transplantation is 92. Total number of featured surgeries (Endoscopic surgery 6,267, Da Vinci Surgical System 191, Hybrid Percutaneous Coronary Intervention 618) is 7,076.
- The number of the hospital's research projects in 2020 reached 412. The hospital published a total of 628 SCI theses, with an average impact of 4.54.
- In terms of clinical teaching and training, we provide year-round and short-term trainings for 405 trainees (292 PGY doctors and 113 interns) from Taiwan and other countries in 2020. We also trained 3,022 medical personnel, many of which were student interns from abroad.

# Chi Mei Hospital

## Radiation Therapy Clinical School

Course content is provided by a multi-disciplinary team from the Department of Radiation Oncology, Chi Mei Medical Center, including subspecialty, radiation oncologists, and medical physicists. Our treatment machines are diversity, including TrueBeam (with HyperArc and RapidArc techniques), and Tomotherapy. Radiation Therapy Clinical School is a complete clinical training program that provides in-depth knowledge for the clinical applications of radiation therapy, especially in SRS/SBRT.

### Duration:

– Course :4 weeks/ 2 person

### Program fee:

– NTD 25,000/month

### Accommodation:

– None

## Program Details

### Study Objective

1. Brain lesions: including primary benign & malignant tumors, such as meningioma, pituitary adenoma, arteriovenous malformations, trigeminal neuralgia, and multiple brain metastasis
2. Head & neck cancer: for primary and recurrent treatment
3. Thoracic lesions: SBRT for primary non-small cell lung cancer or metastatic lung disease
4. Upper GI lesions: primary and metastatic liver cancer
5. GU lesions: SBRT for localized prostate cancer

### Related Skills / Surgical Technique

1. SRS/SBRT techniques
2. HyperArc
3. Tomotherapy

## Applicant Qualification

- Recommended for: The qualified Radiation Oncologists, Medical Physicists, and Medical dosimetrists who have interest in SRS/SBRT treatment.
- Language: English, or Mandarin

## Contact Point

### Department of Radiation Oncology

Name: Sheng-Yow Ho

E-mail: shengho@seed.net.tw

Tel: 886-6-2812811ext.53501

## Achievements

- We installed the 2nd HyperArc in Asia and delivered more than 30 cases with HyperArc, the most treated cases in Asia.
- Our team has published many SCI papers in radiation oncology and cancer biology fields.
- We had provided the 2-year radiation oncologist training course for El Salvador.

# National Yang Ming Chiao Tung University Hospital

## Fracture Liaison Service Training Program

The Fracture Liaison Service Team, established in 2014, is a multidisciplinary team. We integrated rehabilitation care provided to older adults with hip fractures for reduction of the risk of recurrent falls, fracture incidence, and mortality rate.

### Duration:

– Course: 1 month/ 2 person

### Accommodation:

– Included in program fee already

### Program fee:

– Course: NTD 15,000/ month

## Achievements

- In Taiwan, the one-year mortality rate for older adults with hip fractures after surgery is 14.6%. The corresponding mortality rate for the elderly in this program was only 4%. The results illustrate the integrated post-surgery intervention provided by a multidisciplinary medical team to older adults with hip fractures.
- The service team has published the results of care for patients with hip fracture.
- We welcomed overseas medical staff training.

## Program Details

### Study Objective

1. To provide a structure for assessment and management of fragility fracture patients
2. To construct a multidisciplinary team for Fracture Liaison Service

### Related Skills / Surgical Technique

1. Construct appropriate rehabilitation programs to help coordinate patient care post-fracture
2. Treatments to reduce the risk of osteoporotic fractures
3. Comprehensive geriatric assessment

## Applicant Qualification

- The trainee has more than 3-years clinical experiences & more than 1 year working experience.

## Cytoreduction Surgery / Hyperthermia Intraperitoneal Chemotherapy CRS / HIPEC Team Training Program

The CRS/ HIPEC Team, established in Apr. 2016, is a multidisciplinary team. We accomplished animal study, clinical trial, and applied as the first and only single-incision laparoscopic colectomy/omentectomy along with CRS and HIEC for colon cancer with peritoneal carcinomatosis in Taiwan.

### Duration:

– Course: 3 months~1 year / 2 person

### Program fee:

– Course: NTD 10,000 / month

### Accommodation:

– Additional fee, NTD 1,200 / month

### Meals & other information:

– Not offering lunch

## Achievements

- We had conducted 240 cases of CRS/ HIPEC in diverse malignancy with peritoneal carcinomatosis and has comparable overall survival to the major center in the United State and worldwide.
- The research team has publication in the “International Journal of Hyperthermia”.

## Program Details

### Study Objective

1. Surgical indication, Pre-op preparation and workup.
2. Manipulation of HIPEC device at operation setting.
3. Post-op medical care for the patients undergoing CRS/ HIPEC

### Related Skills / Surgical Technique

1. CRS/ HIPEC
2. Minimal invasive surgery for probable CRS

## Applicant Qualification

- Having more than 5 years clinical experiences and more than 5 years working experience.

## Minimal Invasive Surgery for Early Lung Cancer Program

The division of thoracic surgery primarily serves patients with disease of the chest, including lung, esophagus, pleura and mediastinum.

### Duration:

- Course 1: 1~3 months/ 2 persons
- Course 2: 3 months ~1 year/1 person

### Program fee:

- NTD 20,000/month

### Accommodation:

- None

## Program Details

### Study Objective

Precise interpretation of image for early lung cancer

1. Preoperative evaluation and preparation of thoracic surgery
2. Technique of preoperative localization and minimal invasive thoracoscopic surgery
3. Postoperative care of thoracic surgeries

### Related Skills / Surgical Technique

1. Preoperative localization for lung nodules under computer tomography guidance; Case observation and hands-on practice in phantom-model
2. Minimal invasive surgery, including single- and multi-port, for lung cancer; Case observation and experience sharing of surgical technique

## Applicant Qualification

- Qualified medical certificate (medical degree or equivalent) with more than one-year clinical working experience of thoracic surgery.

## Contact Point

### Department of Surgery

Name: Ms. Tina Yang

E-mail: [cshe1017@csh.org.tw](mailto:cshe1017@csh.org.tw)

Tel: +886-4-24739595 Ext 34601

Website: <http://www.csh.org.tw/>

## Achievements

- We performed more than 1000 cases of thoracic surgery in 2020, including more than 500 cases of minimal invasive surgery for lung cancer. Our team developed novel precise preoperative localization under computer tomography guidance of lung nodules for more than 300 cases annually.
- Our research team also has publications and presentations in symposium of thoracic surgery and radio-frequency ablation for lung cancers.
- Our hospital had trained more than 100 foreign doctors for case observation of minimal invasive surgery in the past five years.

# Pingtung Christian Hospital

## Overseas Global Health Practicum Program (OGHP)

The hospital works with Luke International (LIN) in the area of global health developments since 2008 and the OGHP program was initiated in 2011. The OGHP program executive team has clinical, medical, public health, health informatics and global development specialists. The OGHP program has local (Taiwan) and international (Africa) trainings and requires at least 4-weeks field works in Africa.

### Duration:

- Medical Course: 4 weeks / 4 person
- Public Health Course (short): 2 months / 4 person
- Public Health Course (long): 3 months~1 year / 2 person

### Accommodation:

- Additional fee, NTD 2604 / week

### Program fee:

- Course: NTD 20,000/month

### Meals & other information:

- Other cost depending on the field situation (visa fees, transportation, etc.)
- Offering dormitory facility in the field (Africa)
- Breakfast included
- Other programs duration can be negotiated upon request

## Program Details

### Study Objective

1. Gain knowledge, experience and vision for the health career development in global context
2. Gain field clinical experience on tropical diseases and health cares in resource limited settings
3. Build the leadership capacity of Global Health Development and International Health Affairs

### Related Skills / Surgical Technique

1. Global health development project initiation and execution skill
2. Cross-culture working and communication skill
3. Tropical diseases care and treatment clinical skill (for medical interns)

## Applicant Qualification

- At least three-years health related undergraduate program training (medicine, public health, nursing, epidemiology, health informatics).
- The program requires at least 4-weeks field training in Africa. The culture sensitivity and language ability are desirable.

## Contact Point

Website: <https://lukeinternational.no/>

## Achievements

- The OGHP program enrolled medical interns, public health graduate and undergraduate students from National Taiwan University and National Yang Ming University since 2011. International universities are also participating the OGHP program through LIN's partnership. OGHP program partner universities include Universities from Norway, USA, UK and Japan.
- The OGHP program was selected as a case for Good Practice in Global Health Practicum and recommended by APRU. (<https://doi.org/10.1007/s10900-017-0439-z>)
- The program has trained 136 interns/students from local and international universities.

# Cardinal Tien Hospital

## Clinical Microscopy Training Program

The hospital was opened in October 1968 and the laboratory was established. Each year services were expanded. Passed the laboratory certification of TAF in October 2006. Provide high quality of clinical data to assist diagnosis and treatment. There are 40 senior medical technologists in the laboratory. Every year, 8-12 students medical technology are trained for clinical practice.

**Duration:**

– Course : 2 months/ 2 persons

**Program fee:**

– NTD 10,000 / month

**Accommodation:**

– None

**Meals & other information:**

– None

## Program Details

### Study Objective

1. Learn correct sample collection and health education.
2. Able to report correct data of microscopic examination.
3. Able to interpret reports.
4. Became familiar with the concept of microscopic examination quality assurance.
5. Able to detect microscopic examination abnormalities.

### Related Skills / Surgical Technique

1. Learn the correct method of collection and health education, improve the technique of drawing blood.
2. Identify the activities of energy of the human parasites.
3. Have the concept of Microscopic inspection quality assurance.

## Applicant Qualification

- Graduated from the Department of Medical technology, or have more than 1 year working experience in a clinical laboratory.
- Have basic listening and speaking skill in Mandarin and English.
- Require to complete two dose of COVID-19 vaccination with more than 14 days and other isolation policy according to our national government.

## Achievements

- The personnel in the department publish medical and related papers or post at academic conferences at home and abroad every year.
- Among currently trained medical technologist interns, about 1/4 are foreign students or have one parent who is a foreigner. We have trainees from Hong Kong, Macau, Malaysia, Indonesia, Vietnam, Myanmar.

# Taipei Municipal Wan Fang Hospital

## Laboratory Diagnosis

The first department in the country to pass ISO9002. We also participated in the American Clinical Pathology Society (CAP) competency test and awarded certificate of conformity every year. In 2006, we passed the ISO15189 (TAF) laboratory certification, in 2007. We passed the US CAP-LAP laboratory certification and became the fourth medical center in Taiwan to pass the CAP certification. In 2015, we continued to pass the CAP laboratory certification and established a medical laboratory that is in line with the international medical organization.

### Duration:

– Course: 1~3 months/ person

### Program fee:

– Course: NTD 60,000 / month

### Accommodation:

– Included in program fee already

### Meals & other information:

## Cross-Functional Team, Hospice and Palliative Care, and Psycho-Oncology Training Program

The Economist Intelligence Unit released the Quality of Death Index for Hospice Care in 80 countries in 2015, ranking UK the first in the world, the sixth in Taiwan and the highest in Asia.

Founded in February 1990, the MacKay Hospice was the first in Taiwan to provide palliative care for terminally-ill patients. The MacKay Hospice and Palliative Care Center was later built to function as a national and international base. It is hoped that by integrating education, clinical experience, and research. We offer cross-functional training to more palliative care professionals including physician, nurse, social worker, psychologist, pastor, volunteer, college and institute students.

### Duration:

– 1~3 weeks or 1~3 months /  
8~10 quotas a year

### Program fee:

– Physician: 20,000 NTD/month (the price does not include board and lodging)  
– Nurse, Medical Social Worker, Psychologist, Pastor: 15,000 NTD/month (the price does not include board and lodging)  
– Student: 10,000 NTD/month (the price does not include board and lodging)

## Program Details

### Study Objective

1. Cross-functional team training: Holistic Health Care, Family Care, Team Care, Whole Course Care, Community Care, Psycho-Oncology and Psychosomatic Care
2. Hospice and Palliative Care training: Hospice ward, Hospice share care, Hospice home care

### Related Skills / Surgical Technique

1. Symptoms Management in End-stage Patients
2. Psychosocial and spiritual care

## Applicant Qualification

- Physician: Attending Physician, Resident, Medical students
- Registered Nurse and Nurse Practitioner
- Medical Social Worker and student
- Psychologist and student
- Pastor

## Contact Point

### MacKay Hospice and Palliative Care Center

Name: Ching-Hui Chung, Medical Social Worker

E-mail: nnhui1104@mmh.org.tw

Tel: +886-2-28094661ext 3143

## Achievements

- We built the 6C Education Model on cross-functional team in 2015. Our center is accredited as an ESMO designated centre of integrated oncology and palliative care in 2016 and 2018 and was the first certified medical center in Taiwan. 6C Education Model is including “Holistic Health Care”, “Family Care”, “Team Care”, “Whole Course Care”, “Community Care” and “Psycho-oncology and Psychosomatic Care”.
- From 2016 to June 2021, the Hospice trained 89 foreign professionals from Japan, Macao, Indonesia, Republic of Kiribati, Hong Kong, South Korea, Singapore, Malaysia.

# MacKay Memorial Hospital

## International Dermatopathology Training Program

The program is the first International Committee for Dermatopathology (ICDP)-accredited dermatopathology training center in Asia. The program director, Dr. Yu-Hung Wu, is the founder and current president of Asian Society of Dermatopathology.

### Duration:

- months ~ 1 year/ up to 5 trainees
- Can start the training any time

### Program fee:

- NTD 10,000/month for tuition fee

### Accommodation:

- Additional fee, NTD 5,000/week (provided by Taiwan International Healthcare Training Center, TIHTC)

## Program Details

### Study Objective

1. Diagnose skin disease pathologically
2. Familiar with different diagnostic tools in dermatopathology
3. Learn appropriate clinic-pathological correlation
4. Capable to present and conduct research

### Related Skills / Surgical Technique

1. Approach skin pathology slides
2. Interpret chemical and immunochemical stains
3. Capable to read or evaluate immunofluorescence, electron microscope, and molecular diagnosis

## Applicant Qualification

- Dermatology or pathology (Resident or board-certified)

## Contact Point

### Department of Dermatology

Name: Dr. Yu-Hung Wu

E-mail: yuhung\_wu@yahoo.com

### Department of Medical Education

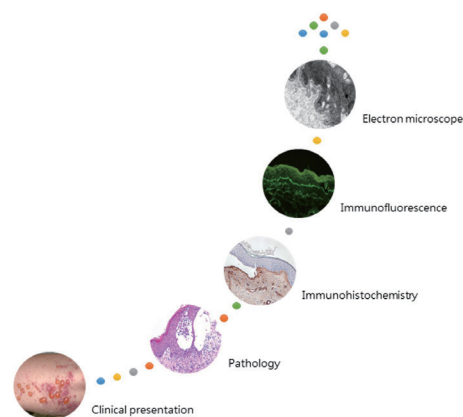

Name: Ms. Mei-Chun Chen

E-mail: mmhedu@mmh.org.tw

## Achievements

- The program provides a comprehensive clinical-pathological training in the skin diseases and more than 5,000 teaching slides in a well-organized system for self-learning. The training includes H&E slide, chemical stain, immunohistochemical stain, immunofluorescence, electron microscopy, and molecular diagnosis in skin pathology.
- There are 31 SCI peer-reviewed journal articles published in recent 5 years (2016 to 2020), including 17 original articles and 14 case reports.
- We have trained 20 international scholars from India (6), Philippines (5), Vietnam (3), Malaysia (2), Myanmar (1), Nepal (1), Sudan (1), and Guatemala (1) since 2012.

## Pharmacist Training Program

SKH pharmacy department comprises five specialized teams: dispensing, medication information, clinical service, continuing education, and regulatory administration. We operate 24/7 and have designated pharmacists in charge of Total Parenteral Nutrition and Chemotherapy compounding. Pharmacists in all teams intensively cooperate with multidisciplinary healthcare providers on a daily basis.

This pharmacy is reputable for creating highly patient-centered environment: special assistant counter for non-exclusive counseling while private-comfy space serves for longer consultation to satisfy sensitive cases' needs.

### Duration:

– Course: 1~2 months/ 2 person

### Program fee:

– NTD 3,000/day  
– NTD 10,000/week  
– NTD30,000/month

### Accommodation:

– Additional fee, NTD 3700/month

## Achievements

- Quality assurance is maintained and improved by online/paper/instant feedback, through PDCA and the flexibility in our department, we are capable of delivering our best professional service to our people promptly. Review prescriptions at all times; sustain a benevolent relationship with other professions as well as our patients, colleges, and families.
- SKH pharmacy research team has a lot of published in the past 5 years.
- The pharmacy training program that has been trained 4 technicians who work in the Belau National Hospital, and 2 students who study in the Howard University of the United States.

## Program Details

### Study Objective

1. Establishing clinical professional skills and practice.
2. Learning drug information and counseling skills.
3. Learning medication administration and quality assurance.

### Applicant Qualification

- Has clinical experiences or working experience more than 1 year.

## Water Exchange Colonoscopist Training Program

Water exchange for screening colonoscopy could increase adenoma detection rate and reduce the discomfort. Dalín Tzu Chi Hospital is the first hospital to implement the water exchange colonoscopies in Taiwan and we have 11 board-certified endoscopists and 9 endoscopy technicians. Since 2012, The Water Exchange Colonoscopy Training Center have performed over 6,000 experiences and we have the most cases of water exchange colonoscopies in Taiwan.

### Duration:

– Course: 3 days/person

### Program fee:

– Course: NTD 2,000/day

### Accommodation:

– Additional fee, (Suite) NTD 700 /day; (Twin room) NTD 1,000/month

### Meals & other information:

– Cafeteria provides vegetarian meals  
– English taught

## Program Details

### Study Objective

1. Lectures for the water exchange colonoscopy.
2. Colon preparation.
3. Setting up the water exchange colonoscopy equipment.
4. Equipment operation and trouble shooting.

### Related Skills / Surgical Technique

1. Water exchange colonoscopy procedure.
2. Underwater polypectomy.

## Applicant Qualification

- The physician should be with the gastroenterology or colorectal surgery license.

## Contact Point

### International Medical Service Center

Name: Ms. Sie

E-mail: ninghuei@tzuchi.com.tw

Tel: +886-5-2648000 ext.5891

Website: <https://dalín.tzuchi.com.tw>

## Achievements

- We performed over 6,000 water exchange colonoscopies (until August, 2021).
- We are the only one hospital for water exchange colonoscopy training Program in Taiwan.
- We hold the most conferences are related to the water exchange colonoscopy among national hospitals.
- We have the most certified endoscopists to perform the water exchange colonoscopy technique in Taiwan.
- We conducted the water exchange colonoscopy related studies and published 20 articles.
- We have trained 49 physicians in Taiwan and transferred the technology to one Medical Center and one Would-be Medical Center.

# Camillians Saint Mary's Hospital Luodong

## Training program of CNA for Dementia Care Service

Concerning the urgent need for the care of dementia, Saint Mary's Hospital Luodong established a dementia care center in 2017, which provides five main services:

1. Medical services: one-stop service for dementia diagnosis.
2. Care consultation: identifying family care needs and providing response skills.
3. Family support: assisting family members to check their status, and sharing care methods through team communication.
4. Personnel training : to educate and train staff, care givers skills of dementia care.
5. To promote the concept of dementia-friendly community : Spreading the knowledge of dementia to the public.

### Duration:

– Course: 10 days/ 4 person

### Program fee:

– NTD 20,000 / course

### Accommodation:

– Can provide assistance in booking an affordable dorm.

## Program Details

### Study Objective

1. To know the workplace of dementia care.
2. To know the disease characteristics of the demented people.
3. To know how to interact and communicate with the demented people

### Related Skills / Surgical Technique

1. Basic level: having individual interaction with the elderly.
2. Advanced level: undergoing group activities with the elderly.
3. Premium level: providing individualized care to the elderly.

## Applicant Qualification

- Senior high school or above
- Those who are interested in caring service

## Contact Point

### Department of Long-term care

Contact Person: Ms. Lin

E-mail: smh07535@smh.org.tw

Tel: +886-3-9544106 ext 5261

## Achievements

- To date, the dementia care center has served 667 demented people, provided 4,115 consultations, trained 420 professionals, and conducted 74 education courses approaching 3,769 people in the community.

# Camillians Saint Mary's Hospital Luodong

## Occupational therapy academic clinical skills

We have 12 experienced staffs in this department. Average of work experience are over 10-15 years in clinical training. We dedicate to improve our treatment skills and provide multiple therapy choices which leads us got well-knowing in this area. We have multiple therapy techniques which enrich our therapist professional in different areas. Which also bring us high therapeutic efficient in our clinical therapy. We join seminar posts or workshops in the occupational therapy unit republic of china every year. Also, we have some staff got PhD degrees and doing clinical researches.

### Duration:

- Course 1: < 1 month / 2 person
- Course 2: 3~1year / 1 person

### Program fee:

- Course: NTD 3000 /day

### Accommodation:

- Other: Can provide assistance in booking an affordable dorm.

## Program Details

### Study Objective

1. Level up in manual skills
2. Multiple splint design
3. Social behavior activity design and training skills
4. Hand writing training program

### Related Skills / Surgical Technique

- 1.dynamic splint manufacture
- 2.hand injury treatment
- 3.manual technique
- 4.social skill training(pediatric)
- 5.hand writing training(pediatric)

## Therapeutic nerve block Training Program

**Duration:**

– 1~3 months

**Program fee:**

– Free

**Accommodation:**

– Application for dorm (limited)

### Achievements

Therapeutic nerve block (Interventional pain treatment), is done by injecting local anesthetics, steroid or other agents to a desired anatomic region causing the drug to infiltrate the targeted nerve to alleviate pain.

1. Caudal block: > 19 cases
2. Erector spine plane block: > 25 cases
3. Stellate ganglion block: > 5 cases
4. Femoral nerve block: > 343 cases

### Program Details

**Study Objective**

1. Being a medical center, there are much clinical practice opportunities.
2. Anatomy and echo guided courses provided by our anesthesiologists.
3. Clinical practices are performed under supervision of a pain specialist. A postoperative visit carried out by nursing staff provides immediate feedback for side effects and patient satisfaction.
4. The department currently has 2 ultrasound machines along with ultrasound simulations for practice opportunities to minimize potential risks and maximize precision of the procedure.

### Applicant Qualification

**Basic qualifications:**

- More than 1 year working experience

**Others specifications:**

- Doctor license and English ability
